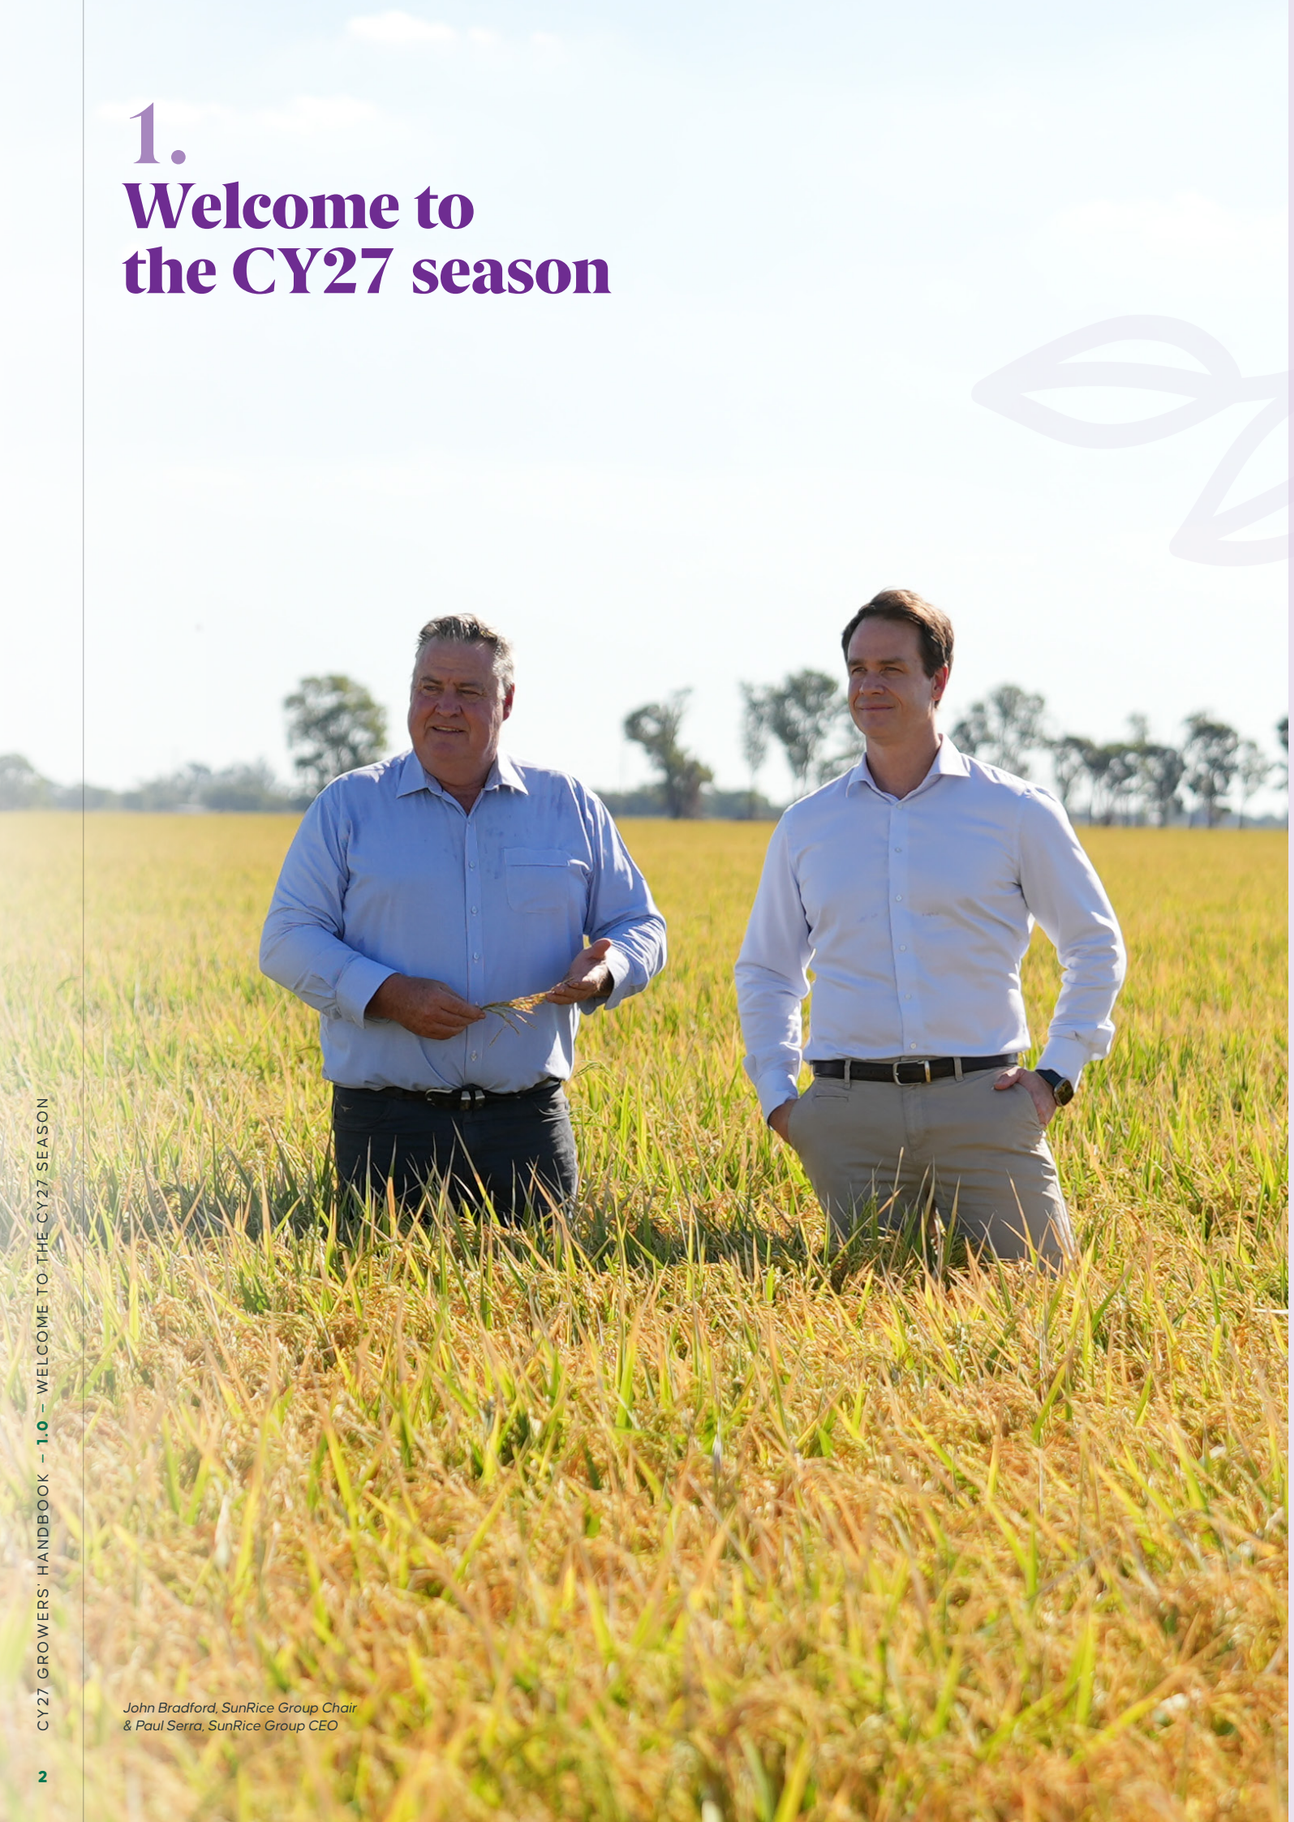
1.
Welcome to the CY27 season



John Bradford, SunRice Group Chair & Paul Serra, SunRice Group CEO

Dear Grower,

SunRice Group's success has been built alongside the skill, commitment and resilience of our Riverina growers. Together, we've adapted to multiple cycles of change, navigating shifting market conditions, different operating environments, and the adoption of innovation – on farm and off – as we seek opportunities to maximise the Australian paddy price.

We recognise that current seasonal conditions and water availability are creating some challenges across the Riverina. Given the improved conditions in recent weeks, we hope rice will remain an important part of your summer cropping schedule although we appreciate the practical realities of the season may make rice a less viable for some growers.

We understand that every farm business is different, and that the decisions being made this year will be different too. What's not changing is our commitment to Riverina growers and the long-term future of the Australian rice industry.

Our approach for CY27 continues our move towards simpler and more flexible contracting arrangements that align your returns with the quality attributes valued by our customers and markets, rewarding grower performance and better recognising the value our growers create.

While our CY27 offer was influenced by seasonal conditions, we are working to build a stronger grower experience, take a greater partnership approach, and deliver more value through the products, services and support we provide. As we continue to evolve our approach, we want to build greater flexibility into the way we work together and CY27 reflects that through the addition of an 'Opt-Out Period' for Matilda$^{\Phi}$ Fixed Price Contracts.

Whether rice is part of your summer cropping program this season or not, our commitment extends beyond a single crop year. Through research, technical support, digital tools, financial solutions and industry investment, we remain focused on supporting the long-term future of the Australian rice industry and the farming businesses that underpin it.

This handbook outlines our CY27 offer and contains the information you need for the season ahead, including seed ordering, contracting, payment options and key dates, as well as information on the products, services and support available to you as a SunRice Grower. As one of the world's largest rice food companies, with established buyers and brands, we are uniquely positioned to connect your rice with consumers around the world and create demand for Riverina rice in premium markets.

We continue to closely monitor seasonal conditions, water markets and planting intentions across the industry. Should conditions improve materially, or if there is a need to review our current contract offering, we will keep you informed and communicate any changes as early as possible.

In the meantime, please don't hesitate to reach out if you have any questions or need further information. Our Grower Services team is ready to help you on 1800 654 557 or via email at growerservices@sunrice.com.au.

Thank you for your continued partnership and support. We look forward to working alongside you throughout CY27 and beyond as we continue building a strong and competitive future for Riverina growers and Australian rice.

John Bradford
SunRice Group Chair

Paul Serra
SunRice Group CEO

2.
Overview* of our CY27 offering

CY27 offer

- For CY27, we're offering Fixed Price Contracts (Hectare Contracts) only.
- The contract price is $500/MT for Matilda$^{\phi}$, where paddy achieves an 8.5 quality score.
- We'll also be offering contracts for:
  - Koshihikari capped at 2,000 metric tonnes volume with a base price of $700/MT for paddy that achieves a 7.5 quality score; and
  - Opus$^{\phi}$ capped at 2,500 metric tonnes volume with a base price of $550/MT for paddy that achieves a 7.5 quality score.

See Section 5 for more details

Seed orders and Fixed Price Contracts

- Fixed Price Contracts will be available on 19 August and will initially open only to growers who delivered paddy in CY26.
- Fixed Price Contracts will then open to all growers on 21 August on a first in, first served basis.
- Contract volumes for Matilda$^{\phi}$ are not limited, but we reserve the right to close the contract offer at our discretion.
- Depending on climate, growing and other conditions, we may also offer additional contracts throughout the year. If this happens, we'll let you know at the right time.

See Section 6 for more details

Opt-Out Period for Matilda$^{\phi}$

- In CY27, we've introduced a new "Opt-Out Period" for Matilda$^{\phi}$ Fixed Price Contracts. This means that you can reduce your contracted hectares or opt out entirely up until 5pm on 15 December 2026 without any supply or wash-out obligations applying to those cancelled hectares.
- If you decide not to continue with some or all of your contracted hectares, those cancelled hectares must be removed at your expense and you will remain responsible for any costs already incurred, such as seed, fertiliser and water. Grower Services will inspect and verify that the crop has been removed.
- If you decide to continue with some or all of your contracted hectares, you will be required to supply paddy to us in accordance with the Fixed Price Contract, and the usual delivery requirements and wash-out obligations will apply.
- As the GrowRice facility is only available for hectares which you have committed to supplying SunRice, hectares subject to a GrowRice facility cannot also be subject to the Opt-Out Period. The GrowRice facility is only available for hectares that are not cancelled during the Opt-Out Period.
- The Opt-Out Period is not available for the Koshihikari and Opus$^{\phi}$ Fixed Price Contracts.

See Section 5 for more details

GrowRice funding

- The GrowRice credit facility has been extended from $2,500 to $3,000 per hectare, and is available to growers on a case-by-case basis.
- GrowRice will only be available for growers who have entered into a Fixed Price Contract or completed a GrowRice – Grower Undertaking. For Matilda$^{\phi}$, GrowRice will only be available for hectares that are not cancelled during the Opt-Out Period.
- GrowRice will now be provided via Westpac's Payment Plus facility, to support funding input costs for the CY27 season through an online prepaid purchase order facility for growers.
- Under this model, eligible growers will complete an online KYC (Know Your Customer) process, access discounted purchase orders for rice crop inputs, including water, and will be responsible for accessing the Westpac Payments Plus platform, releasing the funds into their nominated bank account and paying the relevant vendor/s.

See Section 7 for more details

Quality scores

Quality Scores will remain in place for CY27 and will move to 0.1 increments.

Some varieties have different scales for quality scores due to their varietal characteristics. The variation in quality scores ensures that regardless of what variety is grown you have the same opportunity to achieve a like-for-like premium.

Quality scores are outlined in the table on page 28.

See Section 10 for more details

Trash content

Trash limits will be changing in CY27 through the offer of a discount and incentive payment;

- Trash levels received at 4.0% trash will have $0 impact on the contract price.
- For each 0.1% above 4.0% trash, a discount of $0.50 will apply (-$5.00/ 1.0% per tonne).
- Growers will receive an incentive of $0.50 for every 0.1% of paddy that has less than 4.0% trash (+$5.00/ 1.0% per tonne).

See Section 10 for more details

Crop year communication

We'll be introducing a new Grower Central WhatsApp Community to support the way you receive updates from us. You'll have the option of being added to the community.

See Section 5 for more details

* Please note that this section contains a summary of some of the terms and conditions of the CY27 Fixed Price Contract. For the full terms and conditions of the CY27 Fixed Price Contract, please refer to the sample available in the Portal.

3.
Your rice season, supported at every stage

We're committed to great relationships with our growers across the Riverina. Whether you've been growing for generations or you're thinking about integrating rice into your farming system for the first time, we're ready to partner with you every step of the way.

Our Ambition

Our growers' preferred partner — not just their buyer.

A proud history. A shared future.

Our Values

Integrity

Showing up when it matters. Reliable support, fair returns and a commitment to doing what we say we'll do.

Innovation

Helping growers stay ahead. Investing in research, technology and new ways of farming to build stronger businesses.

Collaboration

Working side by side. Listening, sharing knowledge and making decisions together to create value.

Community

Backing our rice-growing regions. Supporting the people, families and communities that sustain our industry.

From the first planning decision through to harvest, payment and the future of our industry, here's what you can expect from us.

Crop Stage

Business, growth & planning

What matters to you

- Understanding the seasonal outlook, water availability and crop economics.
- Comparing rice with other summer crop options.
- Planning finance, insurance and risk management early.
- Ability to manage cash flow and tax requirements through payments timed to your needs.
- Making confident decisions for your farm business.

How we support you

- **GrowRice:** crop input funding for eligible growers.
- **Crop insurance:** available to select through the seed order process.
- **Decision support tools:** Digital Twin (pilot for CY27) and planning insights.
- **Grower Portal:** access to all your farm business records in one place.
- **PaddyPay:** payment timing options to suit your cash flow and tax requirements.
- **Grower support:** Grower Services Administrators to support you when you need it.

Contracting

What matters to you

- Knowing what contracts are available and when they open.
- Understanding price, payment timing and contract requirements.
- Keeping flexibility while seasonal conditions become clearer.
- Accessing clear contracting information when you need it.

How we support you

- **Contracting options:** CY27 Fixed Price Contracts through the Grower Portal.
- **Opt-Out Period for Matilda$^{\phi}$:** added flexibility before your final supply commitment.
- **Standard payment terms:** 21 days after the end of week in which we take physical possession of your paddy.

Land & water preparation

What matters to you

- Selecting paddocks for optimal profits.
- Applying best-practice layouts and irrigation management.
- Leveraging insights from previous trials and research.
- Managing production risks with confidence.
- Optimising pre-planting nutrition and weed management.

How we support you

- **Rice Extension Program:** delivered on behalf of industry.
- **RRAPL trials:** demonstration sites and research insights.
- **Technical support:** practical guidance from SunRice and industry specialists.
- **Grower Services Administrators:** help with planning, forms and key contacts.

Planting

What matters to you

- Implementing best-practice crop establishment.
- Accessing quality seed at the right time.
- Establishing a high-performing rice crop from the start.
- Managing planting challenges as they arise.

How we support you

- **Pure Seed Program:** access to quality seed for contracted varieties.
- **Grower Portal:** seed ordering, farm mapping and contract submissions.
- **Rice Extension Program:** seasonal best-practice planting advice.
- **Extension Officers:** support with variety selection and establishment decisions.

Growing

What matters to you

- Monitoring crop health, timing and paddock variability.
- Making informed irrigation, nutrition and crop management decisions.
- Benchmarking current performance against historical and industry data.
- Identifying issues early and accessing practical support.

How we support you

- **Rice Management Dashboard:** remote sensing using satellite imagery to provide predictive analysis for crop monitoring and decision making.
- **AI and digital tools:** data-led insights to support timely decisions.
- **Technical support:** crop management advice and data collection through the season.
- **Grower Services Team:** personalised support when you need it.

Harvest

What matters to you

- Implementing best-practice drainage management to optimise quality and yield.
- Understanding receival logistics, depot requirements and safety obligations.
- Accessing timely harvest information and delivery alerts.

How we support you

- **Rice Management Dashboard:** harvest timing and moisture forecasts.
- **PaddyVision®:** quality assessment at receival to determine payment.
- **AGS receival network:** depot logistics, updates and harvest information.
- **Harvest alerts:** delivery details sent directly by SMS when you opt in.
- **Payment timing:** ability to defer your payment till the next financial year to better suit your cash flow and tax needs.

Markets & demand

What matters to you

- Knowing where your rice is sold and the value customers place on Australian-grown rice.
- Partnering with a company focused on building demand for Riverina rice in premium markets around the world.
- Having confidence that your rice is backed by trusted brands, consumer insights and long-term investment.

How we support you

- **Global brands:** creating demand for Riverina rice in premium markets.
- **Market development:** building demand with customers around the world.
- **Product innovation:** developing new products and market opportunities.
- **Industry investment:** supporting the long-term future of Australian rice.
- **Global scale:** combining international market access with local commitment.

Community & industry

What matters to you

- Having a voice on issues that affect growers and the industry.
- Being recognised for the contribution you make.
- Supporting strong regional communities that rely on rice.
- Staying connected with peers, industry bodies and local events.

How we support you

- **Advocacy:** support for issues that matter to growers and the industry.
- **Grower Reference Group:** ensuring the interests and perspectives of growers are represented.
- **RGA partnership:** regular collaboration with grower representatives.
- **Events and sponsorship:** support for field days, forums and community events.
- **Regional investment:** sponsorships and initiatives that strengthen rice-growing communities.

Visit the Grower Central website news section for updates on key dates throughout the season.

Need help through the season? Start here.

Crop Year 2027 (CY27) covers the crop planted in late 2026, harvested in early-mid 2027 and processed and marketed by our team in the next financial year, starting 1 May 2027.

Key CY27 dates

- **20 July:** CY27 Offer Launched
- **Mid-August:** GrowRice Facility Opens
- **19 August:** CY27 Contracts Open for CY26 Growers only, submitted through the Grower Portal
- **21 August:** CY27 Contracts Open for ALL Growers, submitted through the Grower Portal, with contracts confirmed in five working days, first in, first served
- **1 September:** CY27 Digital Growers' Handbook goes live
- **7 September:** Seed orders open, with seed collection as per prior years

Your crop year payments

Our standard contract payment term is 100% of the contract price payable 21 days after the end of week in which SunRice takes physical possession of the paddy.

However, we offer the ability to **advance or defer 100%** of your payment, so you can choose the option that best suits you. These are outlined in Section 7 under **PaddyPay**.

CY27 GROWERS' HANDBOOK – 4.0 – YOUR RICE SEASON, SUPPORTED AT EVERY STAGE

4.
About SunRice Group

SunRice Group is a global branded food business that brings people together through inspiring and delicious food.

Operations in **10** countries across **~65** sites

Sales in close to **50** global markets across **4** key regions

Rice sourced from more than **12** countries, including Australia

~2,300 employees

Giving our growers access to a premium portfolio of brands.

45 Brands

Our business was founded by rice growers in the heart of the Riverina region of NSW in 1950.

Today, as an ASX-listed company with sales in close to 50 markets, SunRice combines global scale with local expertise. We operate a global business model built on rice – a universal food and gateway to tables worldwide – and translate local consumer insights into innovative, trusted products. In Australia and New Zealand (ANZ), where rice and rice-related products remain central to the business, our expertise is also driving expansion into adjacent categories, including Bakery, Condiments, Pet Food and Animal Feed.

Our value chain spans all aspects of food creation, from partnering with our growers, researchers and suppliers, through to milling, processing, product innovation and the delivery of trusted brands to consumers across diverse markets. We seek to create value at every stage for our consumers, customers, employees, growers, shareholders, community and our broader group of stakeholders.

SunRice Technical Officer Jae Moore-Lambert with Deniliquin rice grower Josh Small

4.1. Why choose SunRice as your growing partner?

SunRice has a proud history of working in partnership with our Riverina rice growers. As the industry continues to evolve, we're also reshaping the way we partner you and your farm business.

Our focus for CY27 is simple: through greater flexibility, personalised support and continued investment in research and innovation, we want to help you make informed decisions, improve profitability and support resilient farming businesses for the future.

As a SunRice Grower, you can count on us for:

- **Competitive pricing and guaranteed payment options:** We work hard to deliver strong paddy prices and to provide flexible options to suit your business, including options that reflect seasonal conditions, support consistent supply, and reward you for the quality of paddy you deliver. Plus, our business structure enables the SunRice Group to help withstand drought and changing market dynamics, which means you can rely on us to pay you for your contracted crop.
- **Market insights and growth:** Our deep consumer and market research helps drive demand for Riverina rice, through high-value branded products. Through strategic marketing and category insights, we create stronger market opportunities for our growers, placing your rice into the highest returning markets and delivering better paddy returns.
- **Financial and contracting solutions:** Through our relationships and scale, we can offer you access to tailored financial support, including early-access financing for eligible growers for water and other crop inputs, as well as crop insurance and contract options so you can manage your earning profile in a way that suits you.
- **Ongoing support for a successful future**: Our Grower Services Technical Officers provide you with timely, practical information on industry best practice, research insights, seasonal planning and on-farm decision support to help improve your profitability and resilience.
- Our Grower Services Administrators are here to provide phone and in-person support across contracting, GrowRice, insurance, payments, information management and other grower service needs.
- **Research and development:** Through our research partnerships, we drive improvements in rice genetics and water use efficiency through automation and supporting aerobic rice systems to help enhance yield, efficiency, and climate resilience.

When you're a SunRice Grower, you're part of a trusted network that values and rewards your commitment to quality Australian rice.

Subject to meeting SunRice's eligibility criteria and at the Board's discretion, SunRice Growers may have the opportunity over time to become an A Class Shareholder, giving eligible shareholders a voice in key decisions about the Company's direction. See Section 12 for more on our share structure, which is subject to periodic reviews.

4.2. Contributing to your community

SunRice has been part of Riverina communities for more than 75 years. Many of our employees live, work and raise their families in the same towns as our growers, and we understand the important role strong regional communities play in supporting local families, farms and businesses.

From the Western Murray Valley to the MIA, we contribute to more than 12 regional communities across our rice growing regions. We support local employment, we engage with regional businesses and suppliers and we continue to invest in research and innovation that helps maintain a strong and sustainable future for Riverina rice.

We're also proud to support initiatives that help strengthen the rice industry and regional communities. This includes programs such as the Jan Cathcart Memorial Scholarship and the Ricegrowers' Association of Australia (RGA) Scholarship Program, which help develop future industry leaders, as well as our support for industry events, grower recognition programs and opportunities that bring the rice industry together.

Beyond industry initiatives, we regularly support local community organisations, sporting clubs, schools, agricultural shows, community events and fundraising activities across the rice-growing region. These organisations play an important role in creating connected and vibrant communities, and we're proud to contribute where we can.

If you're involved with a community group, sporting club, school, event or local organisation that is seeking sponsorship or support, we encourage you to contact our Grower Services team, who can help direct your enquiry.

50+ Local organisations supported last year

We contribute to more than **12** regional communities

2026 Jan Catchcart Memorial Scholarship recipient Jane Hatty from Tocumwal

4.3. Your input matters

Grower input and feedback continues to shape the way we work. From contract design and digital tools, to technical support and communications, we're committed to understanding what matters most to you and using that feedback to guide future improvements. Our goal is to build products, services and support that help you make informed decisions, improve profitability and support resilient farming businesses for the future.

For CY27, there are multiple ways in which you can share your feedback and contribute ideas, including:

- **Grower Reference Group:** Our SunRice Grower Reference Group will be refreshed in CY27. It provides a dedicated forum for growers and SunRice representatives to discuss matters relevant to the industry and the grower experience. The group provides valuable feedback on grower services, operational matters and strategic opportunities, helping ensure your perspectives are considered across the business.
- **CY27 Grower Central WhatsApp Community:** A new initiative for CY27, the Grower Central WhatsApp Community will provide a simple, easy-to-access place for growers to stay connected during the season. Through dedicated channels, you'll be able to receive timely digital updates direct to your phone on topics relevant to your rice farming business, while also supporting two-way communication between growers and SunRice so questions, feedback and practical insights can be shared more easily throughout the crop year.
- **Your Grower Services team:** Whether you're partnering with our Administrators on contracting and payments, seeking practical advice from our Technical Officers during establishment or harvest, or getting to know your new Grower Relationship Manager later in the season, our team is here to support you. We encourage you to share your ideas, thoughts and feedback with them.
- **Ricegrowers' Association of Australia (RGA):** The RGA is the peak body representing Australian rice growers. Through its Central Executive and regional network, the RGA advocates on behalf of growers on key issues including water policy, industry sustainability, government engagement and the future growth of the rice industry. SunRice regularly engages with the RGA to discuss industry matters and hear directly from grower representatives about priorities, opportunities and challenges facing growers.

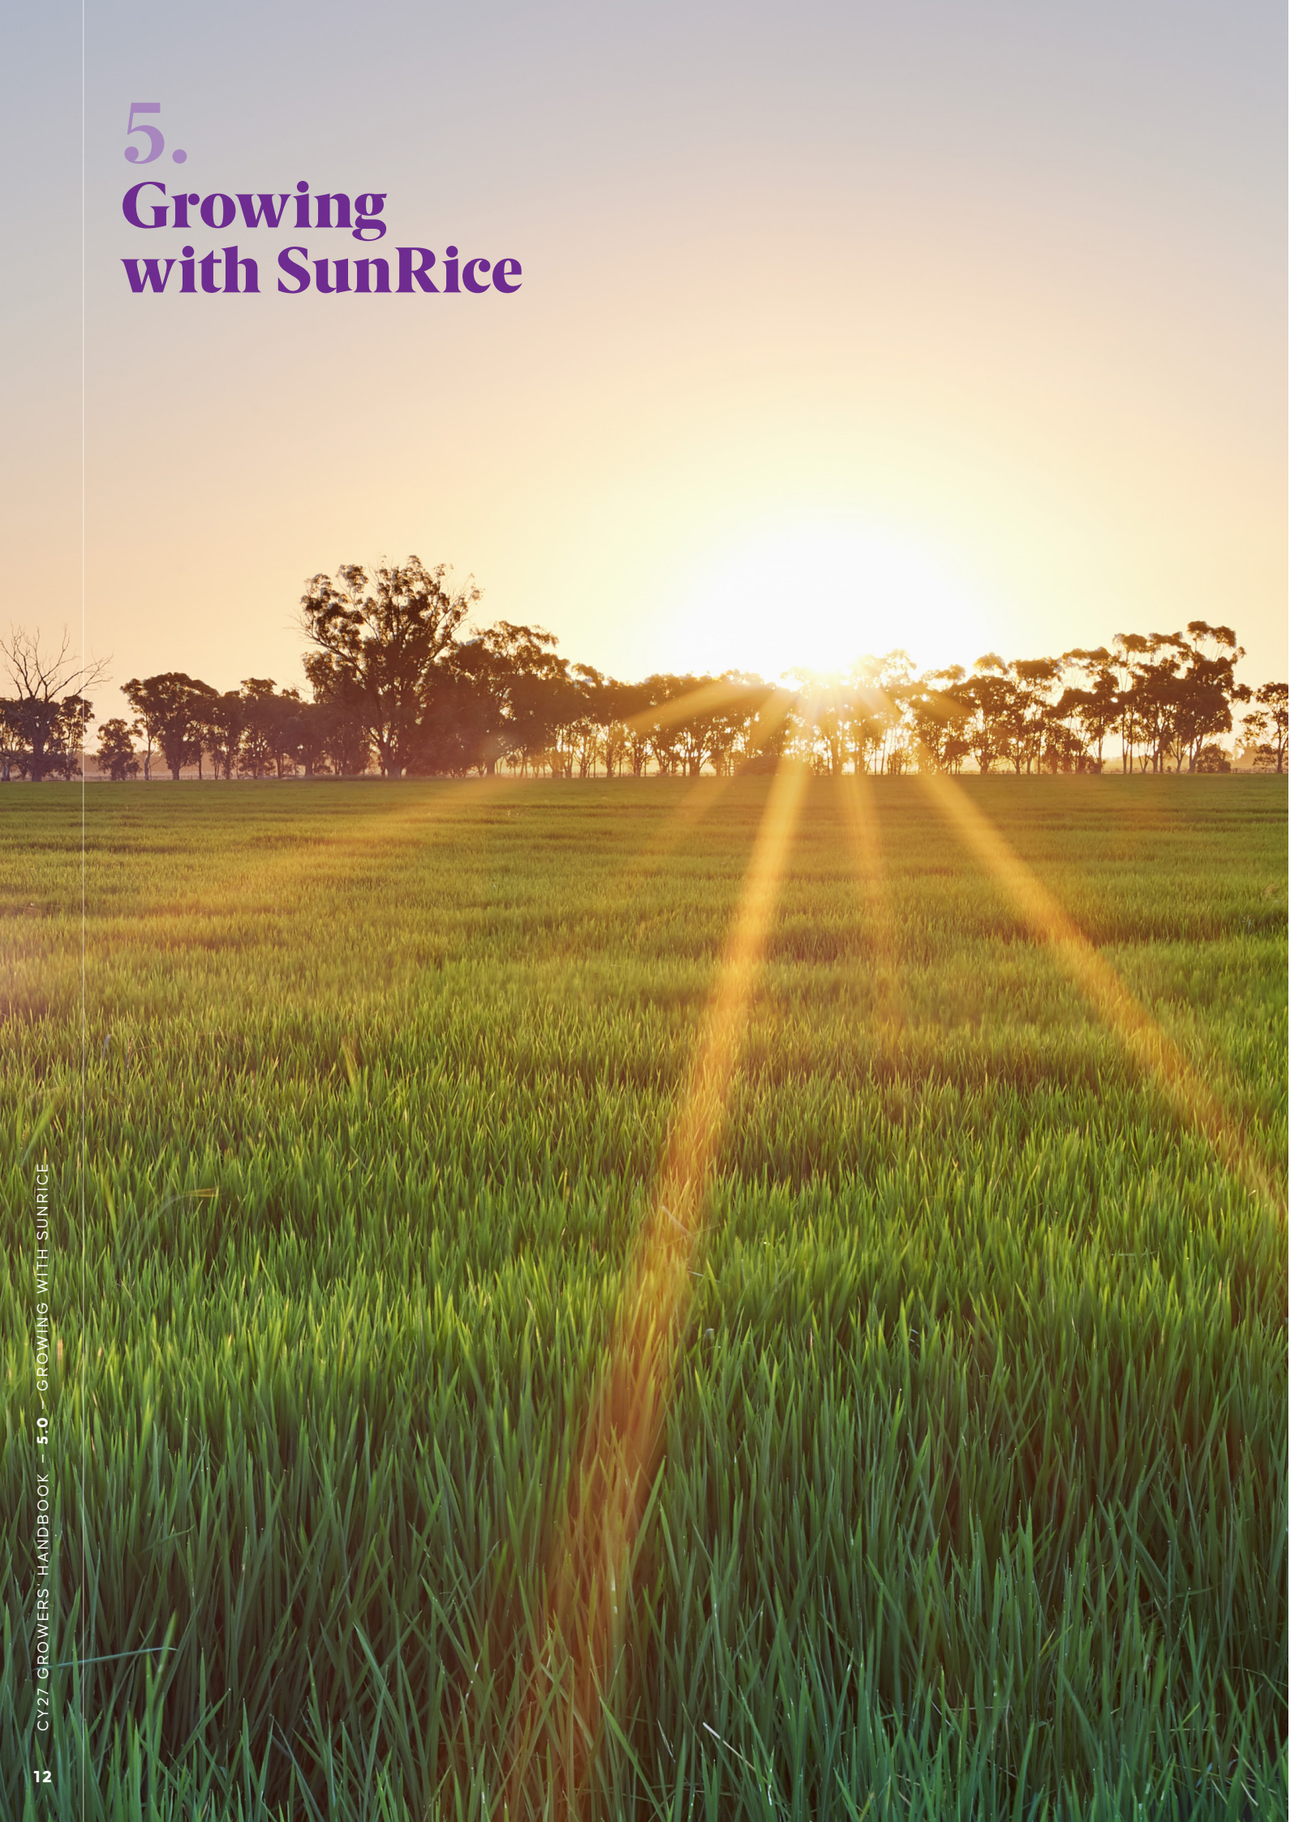
Ongoing engagement

In addition to these formal channels, we'll regularly engage with you throughout the year via meetings, industry events, field days, site visits, surveys, communications and one-on-one interactions.

Together, these channels help ensure you remain connected, represented and actively involved in shaping the future of both SunRice and the Australian rice industry.

Grower Services | T: 1800 654 557 | E: growerservices@sunrice.com.au | sunrice.com.au/grower-central

5. Growing with SunRice



In this section, you'll find information about the CY27 contract offer, pricing, payment terms, rice varieties and grower support available throughout the season. It also outlines key requirements relating to quality, deliveries and maintaining varietal integrity for our premium markets.

Please note that this section contains a summary of some of the terms and conditions of the CY27 Fixed Price Contract. For the full terms and conditions of the CY27 Fixed Price Contract, please refer to the sample available in the Portal.

5.1. CY27 paddy sought

While our ongoing target volume is ~500,000 metric tonnes of Riverina rice to support our markets and optimise the use of our Riverina milling assets, we recognise that water availability, seasonal conditions and other external factors will ultimately influence production and deliveries this season.

5.2. CY27 Fixed Price Contract offers

For CY27, we are again offering a Fixed Price Contract. The contract offer will be available for **Matilda**[Φ] with no volume limit. Limited contract volumes will be available for two specialty varieties only – Koshihikari (2,000 metric tonnes) and Opus[Φ] (2,500 metric tonnes).

The Wash-Out Fee is **$500/MT x tonnage** under **75% of the three-year Regional Varietal Average** multiplied by the contract hectares (and outside the tolerance).

5.3. CY27 pricing

We calculate the contract price on offer taking into account a range of factors, including current water allocations and pricing for our growers; as well as foreign exchange, global rice pricing and geopolitical contexts, which influence the prices we can achieve for Riverina rice.

The price payable per tonne for specialty varieties is set out in the table on page 28 and depends on the variety and the PaddyVision® Quality Score. Some varieties have different scales for quality scores due to their varietal characteristics. The variation in quality scores ensures that regardless of what variety is grown you have the same opportunity to achieve a like for like premium.

Contract base pricing

Matilda[Φ]	**$500/MT**
Koshihikari	**$700/MT**
Opus[Φ]	**$550/MT**

We monitor market conditions and, as in prior years, we reserve the right to close offers for any specific varietal at any time and without prior notice. We also reserve the right to offer additional varieties, dependent upon those conditions. We'll alert you when contracts open and close.

Future contract allocation

If you delivered paddy to SunRice in CY26, you'll have early access to contracts for all available varieties for a two-day period commencing on 19 August 2026, prior to contracts opening to all growers on 21 August 2026.

If you grow in CY27, you will have priority access to CY28 contracts (after CY26 growers) and CY29 contracts. This means that you'll have the opportunity to enter into a Fixed Price Contract before the contracts are made available to the broader growing community.

Contract options

Depending on changes to climate, growing and other conditions, we may offer additional contracts throughout the year. If we do so, we will communicate with you clearly on any new contracts and options at the time.

Please note that if you already have a contract with us for CY27, you won't be able to switch to another type of contract with us. You are, however, welcome to apply for additional contracts.

5.4. Payment terms

Our standard contract payment term is 100% of the contract price payable 21 days after the end of week in which we take physical possession of the paddy.

However, we offer the ability to **advance or defer 100%** of your payment, so you can choose the option that best suits you. These are outlined in Section 7 under **PaddyPay**.

[Φ] Plant Breeder's Rights (PBR): Legal protection granted to plant breeders over new plant varieties. PBR-protected seed may only be used in accordance with the conditions set by the breeder or licence holder. For more information contact Grower Services.

5.5. Opt-Out Period for Matilda$^{\Phi}$

In light of the current seasonal outlook, we recognise that some growers may not yet be in a position to make a binding commitment to grow and supply paddy this season.

To provide greater flexibility, we are introducing an **Opt-Out Period** for Matilda$^{\Phi}$ Fixed Price Contracts. The Opt-Out Period is intended to help share seasonal risk with growers, particularly in a year where greater certainty around water allocations may not be available until after the ideal planting window.

What is the Opt-Out Period?

The Opt-Out Period allows you to purchase seed, plant your crop during the optimal planting window and establish your crop, while delaying your final decision on whether to commit to supplying that crop to SunRice.

You can plant your crop and then have until **5pm on 15 December 2026** to decide whether to proceed with a binding commitment to supply. If you choose not to proceed before that date, you may opt out without a wash-out fee applying. However, you will remain responsible for all costs incurred in establishing the crop, such as seed, fertiliser and water. The Opt-Out Period provides flexibility in relation to your supply commitment but does not remove the costs associated with planting and establishing the crop.

SunRice refers to the period between seed purchase and 5pm on 15 December 2026 as the **Opt-Out Period**, being the period during which you can decide whether to proceed with a binding commitment to supply your crop to SunRice.

How does the Opt-Out Period work?

Here is how the Opt-Out Period works:

1. **Submit your Fixed Price Contract for Matilda$^{\Phi}$**
2. **Submit your seed order.** To access seed and get planting, you will need to submit an Order Form for a certain quantity of Matilda$^{\Phi}$ hectares.
3. **Plant your crop during the optimal window.** Get your crop in the ground at the best time for your farm. For crop subject to an Opt-Out Period, you can do this without committing to supply the full contracted hectares yet.
4. **Decide by 5pm on 15 December 2026.** Before this date, you have the following choices for contracted Matilda$^{\Phi}$ hectares:

Option A: Confirm you want to continue with some or all of your crop: Give written notice to Grower Services before 5pm on 15 December 2026 that you will be proceeding with some or all of your contracted hectares. You will then be bound to supply the relevant crop to SunRice and the Wash-Out Fee applies from this point. GrowRice credit (up to $3,000 per hectare) is only available for committed hectares.

Option B: Walk away from all or part of your crop: Give written notice to Grower Services before 5pm on 15 December 2026 that you will not be proceeding with some or all of your contracted hectares. There is no Wash-Out Fee and no contract penalty for doing so. This option is only available for hectares you have not already committed to supplying SunRice under Option A.

Option C: Take no action by 5pm on 15 December 2026: At the end of the Opt-Out Period, you will automatically become committed to supplying all contracted hectares to SunRice, except for any hectares you have already withdrawn under Option B. The Wash-Out Fee applies to, and GrowRice credit (up to $3,000 per hectare) is available for, all remaining committed hectares.

5. **If you decide not to continue with all or part of your crop per Option B**, you must remove the crop from the paddock at your own expense. Grower Services will inspect and verify that the crop has been removed.

Who can access the Opt-Out Period?

Any grower entering into a Fixed Price Contract to purchase seed and supply Matilda$^{\Phi}$ paddy to SunRice can access the Opt-Out Period for that contract, provided the relevant hectares are not subject to a GrowRice facility. As the GrowRice facility is only available for hectares which a grower has committed to supplying SunRice, hectares subject to a GrowRice facility cannot also be subject to the Opt-Out Period.

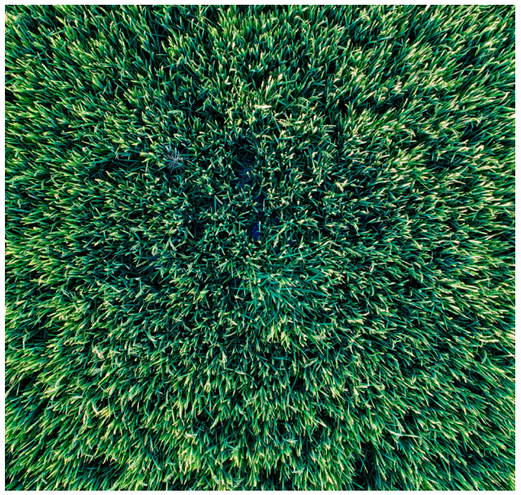
The Opt-Out Period is not available on Fixed Price Contracts for the supply of Koshihikari or Opus.$^{\Phi}$

When does the Opt-Out Period end?

The Opt-Out Period ends at 5pm on 15 December 2026.

From 16 December 2026, all contracted hectares become committed unless you have previously notified Grower Services that you will not be proceeding with some or all of your contracted hectares.

If you're looking to finance crop inputs via GrowRice before 15 December 2026, you will need to commit to supplying the hectares against which you are seeking financing in advance, by entering into a GrowRice – Grower Undertaking (ie, end your Opt-Out Period early with respect to the relevant hectares).



5.6. CY27 rice varieties

In CY27 we will only be offering contracts for Matilda,$^{\Phi}$ Koshihikari and Opus$^{\Phi}$:

- **Matilda**$^{\Phi}$ is a semi-dwarf, bold, medium grain variety with high yield potential, outperforming Reiziq$^{\Phi}$ in grain yield in all our district experiments. Matilda$^{\Phi}$ has higher cold stress tolerance and reduced shattering compared with Reiziq.$^{\Phi}$ Matilda$^{\Phi}$ has a similar growth duration to Reiziq$^{\Phi}$ but has the advantage of continuing to develop during periods of cool temperature. Although the canopy of Matilda$^{\Phi}$ stays greener at maturity than Reiziq's$^{\Phi}$ canopy, Matilda$^{\Phi}$ matures a few days quicker from flowering.
- **Opus**$^{\Phi}$ is a semi-dwarf short grain sushi variety grown only in the Murray Valley. It has moderate establishment vigour, is resistant to lodging and moderately resistant to cold during the reproductive period. It is a pubescent variety and is susceptible to straighthead with symptoms presenting as floret sterility.
- **Koshihikari** is a premium short grain Japanese variety that is tall. It is a lower-yielding variety, but a premium is paid to compensate for this. Koshihikari is very susceptible to lodging and should not be aerially sown. To minimise lodging, reduce the total applied nitrogen by 50% compared with Reiziq.$^{\Phi}$ Koshihikari is a pubescent variety and is susceptible to straighthead.

Helpful growing guides for each variety can be found in your Grower Portal. If you're looking for advice about seed selection and what's best suited to your farm or region, our Grower Services team is ready to help you.

5.7. Maintaining variety integrity for SunRice markets

When choosing your seed (see Section 5.6), you can impact your quality score (and therefore your paddy return) by failing to maintain variety integrity.

If you're planning to sow on the stubble of last season's crop, you should order seed of the same grain type or an approved variety to avoid what we call admixture.

Admixture – in particular between long and medium grain varieties, and also in short grains – makes processing and marketing this grain more difficult (and in some cases may result in rejection of product by SunRice).

As a result, if admixture shows up in your receival loads, the price will be discounted to the lowest grain price applicable to the variety/s contaminating the paddy. More information on quality discounts is in Section 10.

If you need help or guidance, please call our Grower Services team to discuss your options.

MIA rice grower Nathan Irvin with SunRice Grower Services & Extension Manager Mark Groat

The Chalmers Family on their property near Moulamein

5.8. Grower Services support

Whether you're new to growing or have been working with the SunRice Grower Services team for decades, we're ready to help.

Call our Grower Services Administrators **Lisa, Eleanor and Melissa** on **1800 654 557** or email us at **growerservices@sunrice.com.au** for:

- Change of farm, banking or business details.
- Grower Portal support, including contracting, farm mapping and seed ordering.
- PaddyPay, GrowRice and crop insurance.
- Payment information.
- General questions, including which forms to use and how to access them.

Call **Mark (0419 174 772)** in the Grower Services Technical Team for advice on:

- Variety selection.
- Planting advice.
- Crop management and monitoring.
- Accessing and using your Rice Management Dashboard to inform decision making.
- Understanding your PaddyVision® results.

5.9. Communication and alerts

There are lots of ways we can communicate with you during the crop year so that you receive all information at the right time to make informed decisions on your farm. For CY27, this includes:

- CY27 Growers' Handbook.
- Seed Order Form and Fixed Price Contract.
- Seed and harvest updates.
- Grower Updates and other newsletter content.
- Chair and CEO messages and alerts.
- Information about events, meetings, information sessions and presentations.
- Grower Central Website.
- Your Grower Portal.

As a SunRice Grower, you can choose how we communicate with you. A small number of our growers still prefer mailed communication but given some of the information we send you is time sensitive (like the opening and closing of contracts), we strongly encourage you to opt into electronic communications.

If you would like to switch how you receive communications (or who in your farm business receives them), contact Grower Services.

SunRice Grower Central WhatsApp Community

The SunRice Grower Central WhatsApp Community is a new communication channel designed to help growers stay informed with timely and relevant updates throughout the season.

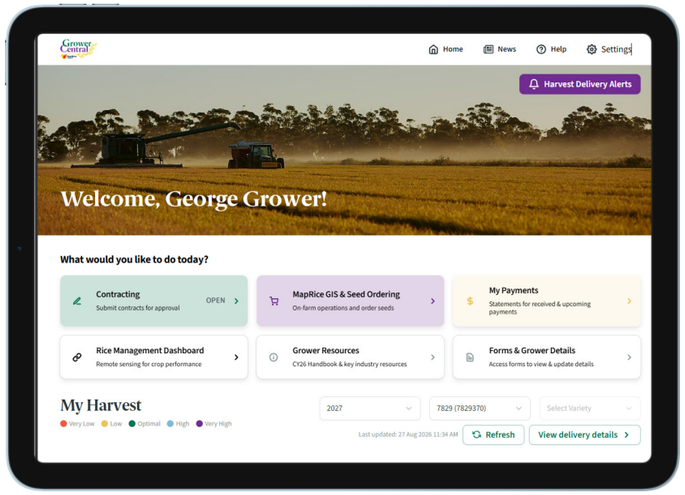
Community members may receive:

- Important grower communications.
- Season and program updates.
- Key dates and reminders.
- Event and meeting information.
- Relevant operational announcements.
- Links to further information available through Grower Central.

The community is managed by SunRice and is intended to complement existing communication channels, providing a simple and convenient way to receive important information directly on your mobile device.

Join the SunRice Grower Central WhatsApp Community by scanning the QR code.

Joining is voluntary and has no effect on your supply arrangements with SunRice. Other members may be able to see your mobile number when you join. You can leave the Community at any time via WhatsApp (Community info > Exit Community). By scanning the QR code, you consent to your mobile number being used to add you to the Community.



5.10. Grower Portal

The SunRice Grower Portal provides you with direct access to essential information, tools, and resources to support your growing operations.

The portal is secured with two-factor authentication, linked to either your mobile or a multi-factor authentication app.

Once logged in, your portal provides a central access point to submit seed orders, manage payments, contracts and deliveries, while keeping across market updates, helping you stay informed and organised.

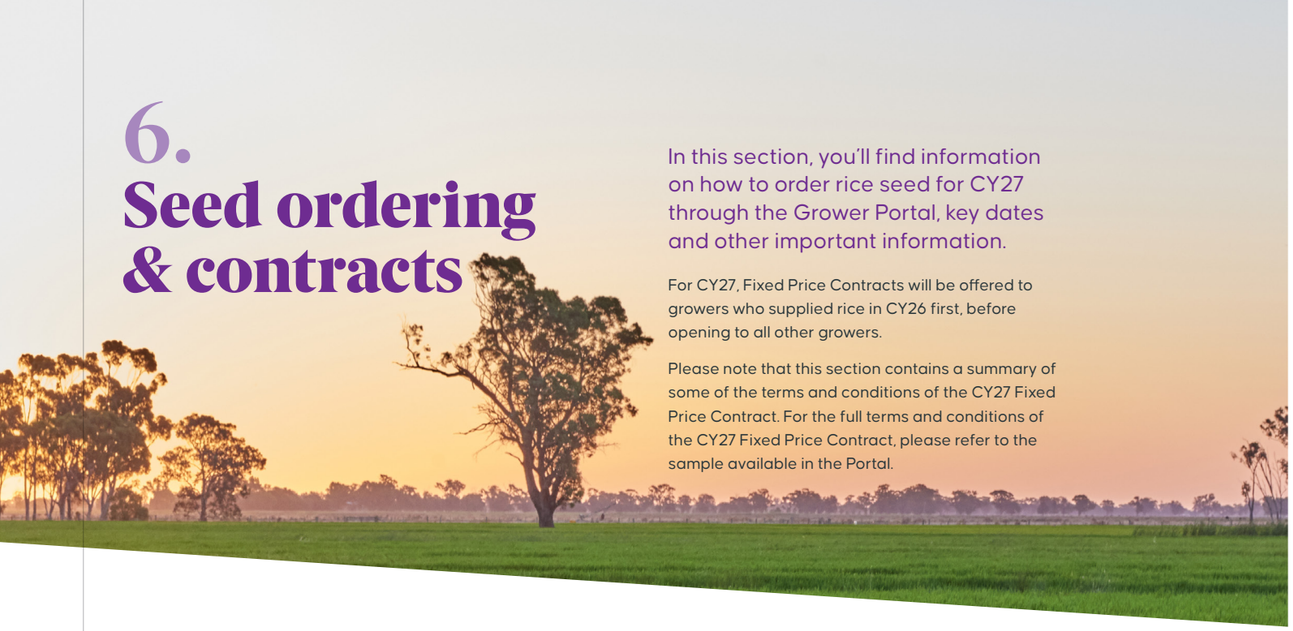
What can you do in the portal?

- **Seed Ordering** – select and adjust seed orders based on paddock requirements, with the full ordering process – including seed payment terms – available within the system. A summary of all seed orders linked to your grower number is accessible at any time.
- **Contracting** – submit online contracts for multiple farms and varieties. Contracts can be created through a streamlined form and submitted for approval, with all contracts stored in one place for easy reference. Once a contract is approved, a confirmation email is sent from SunRice.
- **Growing Resources and News** – access the latest SunRice communications, industry updates, and a library of past newsletters, forms and growing guides, helping ensure you never miss important correspondence.
- **My Payments** – a central location for viewing and managing your payment records. Display total payments received and upcoming payments, with the ability to filter by calendar year. Statements can be downloaded as PDFs for record-keeping.
- **Forms and Grower Details** – manage your grower details and transactions, including access to key forms and records, making it easier to keep details up to date. Available functions include:
  - Updating trading details, farm details, bank account information, or contact details.
  - Downloading and submitting essential forms.
  - Viewing previously submitted forms for reference.
- **My Harvest Status** – located at the bottom of the homepage, the dashboard provides real-time tracking of your deliveries. Key metrics such as moisture levels, trash percentage, and dry weight are displayed, along with an average summary of all deliveries to date. A detailed list view is also available, allowing for a clear breakdown of each delivery, with an option to export data into an Excel file.
- **Opt-in to Harvest Alerts** – opt into Harvest Delivery Alerts for SMS notifications with ticket details for each delivery during harvest, without needing to log in to the portal.

Forms and processes on the portal:

- Farm Details.
- Trading Details.
- Bank Account Details.
- Notice of Lease Form.
- RCTI Agreement Form.
- Share of Proceeds Form.
- Opt-in to Alerts.
- Crop Payment Options.
- Share of Proceeds.
- Create a Contract.
- Pre-Delivery Declaration.
- Print-Delivery-Card.

Not using the Grower Portal?
If you don't have access to the Grower Portal, please contact Grower Services directly on 1800 654 557. We can set up your login details and show you how to use the Portal, including sending you tutorials and 'how to' guides.



6. Seed ordering & contracts

In this section, you'll find information on how to order rice seed for CY27 through the Grower Portal, key dates and other important information.

For CY27, Fixed Price Contracts will be offered to growers who supplied rice in CY26 first, before opening to all other growers.

Please note that this section contains a summary of some of the terms and conditions of the CY27 Fixed Price Contract. For the full terms and conditions of the CY27 Fixed Price Contract, please refer to the sample available in the Portal.

6.1. Applying for Fixed Price Contracts

To apply for a Fixed Price Contract, you can do this in the Grower Portal or by calling Grower Services.

Look for the section on 'Contracting' in the Portal, which will guide you through the steps.

A sample CY27 Fixed Price Contract is also available to review on the Portal or by contacting our Grower Services team.

Please note additional contracts may be offered (and entered into) at any time during the crop year. We'll let you know when they become available and when they close.

As in prior years, we reserve the right to close and amend any contract at any time (before the contract is entered into) without prior notice.

6.2. CY27 Wash-Out Fees

The Wash-Out Fee under the CY27 Fixed Price Contracts is $500/MT for any volume shortfall below 75% of the three-year Regional Varietal Average multiplied by the hectares (outside the tolerance) of the contract.

However, you can source volume shortfalls from other growers if required.

For example:

- You have a Fixed Price Contract for 100 Confirmed Hectares.
- The Regional Varietal Average is 11 tonnes per hectare.
- You will need to deliver 825 tonnes (100 Ha x 11 T/Ha x 75%) to SunRice to avoid a washout.
- You deliver only 700 tonnes.
- You can elect to source the 125MT shortfall from another grower OR SunRice enforces the washout fee which would be 125MT x $500/MT = $62,500.
- SunRice, in its absolute discretion, will determine the final washout volume applicable within the tolerance under the Fixed Price Contract.

3 Year Regional Variety Average Yield

	MIA	CIA	EMV	WMV
Matilda$^{\phi}$	13.04	11.45	11.46	10.91
Opus$^{\phi}$	-	-	10.43	9.84
Koshihikari	-	-	9.02	8.27

6.3. SunRice Grower contractual terms

Before completing your seed order, please ensure you have read the terms of your Fixed Price Contract.

This is a contractual document provided by SunRice for our growers and outlines terms and conditions under which you can purchase rice seed from us and supply the harvested paddy back to the Company.

6.4. CY27 seed ordering checklist

Step one:

- Ensure your details are up to date before ordering. Call our Grower Services team if you have:
  - A new delivery name or ABN.
  - Changed postal address, email or phone number.
  - Changed banks or have a new bank account number.
  - An expiring or new share farming or lease agreement.
  - Purchased a farm recently and intend to grow rice on it in CY27.
- Read SunRice's Personal Information Collection Statement (Section 11.1).
- Ensure you review and understand the terms and conditions included in the Fixed Price Contract.
- Ensure you review and understand your commitments under SunRice's Supplier Sustainability Code (Section 8.1).

Step two:

- Review available varieties and premiums (Sections 5.3, 5.6 and 10) and contact Grower Services if you need support in seed selection.
- Familiarise yourself with CY27 Quality Specifications (Section 10.3) and Wash-Out Fees (Section 6.4).

Step three:

- Access your SunRice Grower Portal from 9am on 19 August 2026 for CY26 growers and from 9am on 21 August 2026 for all other growers to:
- Submit a request for a Fixed Price Contract.

Step four:

Access your SunRice Grower Portal from 7 September 2026 to place your seed order for your Fixed Price Contract via MapRice GIS.

- Apply for Crop Insurance if desired (Section 7.1)
- Choose your seed payment option (Section 6.6).
- At seed issue time (September 2026) make a booking with your issuing depot for collection (Section 6.8).

6.5. How to order seed

You can order your CY27 seed through your Grower Portal in line with the dates in this section. Once you've logged in, use the 'MapRice GIS' tab to select your farm/s, paddock/s and choose the seed for each.

The portal will automatically calculate the seed volume required for your farm/s before you submit your order.

If needed, our Grower Services team is available to help you with the online seed ordering process.

An online tutorial on mapping farm and paddock boundaries using MapRice GIS is also available by scanning the QR code.

Not using the Grower Portal?
If you don't have access to the Grower Portal, please contact Grower Services directly on 1800 654 557. We can set up your login details and show you how to use the Portal or, if you prefer, mail you a Rice Seed Order form to fill in and return.

6.6. Purchasing seed and other crop inputs on credit or cash terms

To assist you with your planting program, in some instances we can provide rice seed on credit terms to growers who have a contract with SunRice (meaning we will deduct your seed payment from your CY27 return).

If you'd like to access these terms for seed purchase, please be aware that in order to be eligible, you cannot have an outstanding seed debt.

Alternatively, you can purchase seed on cash terms and pay by cheque at the issuing depot or by BPay or by EFT to the SunRice account detailed on your seed invoice. If paying by BPay or EFT, payment must be received within 7 days from date of collection.

Please select your seed payment option online when ordering.

6.7. Seed issue depots

In general terms, seed orders will only be filled by bulk supply. We hold a very limited stock of bagged seed and this will be available for re-sows only.

At this stage, the following AGS depots are available for CY27 collection and pricing. If further seed issue depots are opened in September, we'll let you know closer to the time:

CY27 Pure Seed Price Bulk $/MT excl GST
(Prices applying to growers who contract to supply all paddy to SunRice)

Seed Issue Depots		Variety	Seed Prices	
			Ex Grading Depots (Whitton & Deniliquin)	
Whitton	Deni		Cash	Credit
•	•	**Matilda$^{\phi}$**	$885	$911
	•	**Opus$^{\phi}$**	$935	$963
	•	**Koshihikari**	$1,085	$1,117

6.8. Seed collection arrangements

If we've confirmed your seed order, at seed issue time in September please make a booking with the issuing depot.

You'll need to phone the seed issue point on one of the numbers below at least two days prior to your planned collection date.

If there are any changes to the information listed, we will let you know in advance.

Whitton 02 6955 2727 – Weighbridge
0428 264 318 – Graham Smith

Deniliquin 03 5881 0241 – Weighbridge

Please note there will be no grower access to any weighbridge office or testing stand.

6.9. Information for Non-Supplying Growers

We provide access to certain rice seed for all growers, not just our own. It's part of our commitment to research and development and a strong industry.

This handbook is designed for SunRice Growers. Information for our Non-Supplying Grower Seed Ordering service can be found on our Grower Central website under **Information for Non-Supplying Growers**.

6.10. Other useful information and links

NSW DPI Rice Variety Guide:
dpird.nsw.gov.au/agriculture/broadacre-crops/summer-crops/rice-variety-guides/rice-variety-guides

MapRice GIS Seed Order User Guide:
sunrice.com.au/map-rice-gis-seed-order-guide

MapRice GIS Manage Farms Guide:
sunrice.com.au/map-rice-gis-manage-farms

7. Additional products & services for growers

Elsie and Charlie Small from Deniliquin

When you grow for SunRice, you'll have access to a range of products and services designed to give you flexibility and options when it comes to managing your crop and your cash flow.

From our Rice Crop Insurance Program and competitive GrowRice crop input funding, through to managing your cashflow timing with PaddyPay or deferral options, this section includes information about what's on offer to eligible growers and how to apply.

7.1. Insurance for your CY27 rice crop

As a SunRice Grower you can select insurance cover for your rice crop when you place your seed order (you'll be prompted to tick a box as part of the order process available on the Grower Portal).

Insurance premiums for the CY27 season are not yet available. Our Grower Services team will confirm your policy and pricing in late November 2026 and at that time, you can opt out or change the excess level applying to your policy.

You can read more about the SunRice Rice Crop Insurance program on our Grower Central website under 'Documents and forms'.

7.2. Access to GrowRice to fund crop inputs

Through GrowRice, we offer easy to access, competitive financing to help eligible growers access up to **$3,000 per hectare** (on a case by case basis) to manage input costs, across your production season.

Criteria for the approval of GrowRice funding includes that you have:

- Supplied rice to SunRice in the CY24, CY25 or CY26 harvest;
- Achieved at least 75% of the regional average yield for the variety/s grown in the years of delivery; and
- Entered into a Fixed Price Contract to produce rice for us in CY27.

If approved, you can access GrowRice funding for crop inputs, including water, fertiliser and pesticides, with repayments deducted from your CY27 crop proceeds.

For more information about GrowRice see our FAQs under 'Documents and forms' on our Grower Central website.

If you're ready to apply, or if you're growing for the first time and would like to understand how to access GrowRice, contact our Grower Services team.

7.3. Flexible payment options

You can choose to be paid in a way that best suits your cash flow and tax needs.

Our PaddyPay program, supported by Rabobank, allows approved growers to access their payment five working days from the end of week of harvest delivery.

Different growers delivering from the same farm can also opt to be paid in different ways, and you can choose different options on different farms.

PaddyPay is optional and there is a cost associated with selecting to be paid this way. You can choose the PaddyPay option on your Grower Portal prior to harvest.

The payment options available to approved growers are:

- **Option One:** 100% of the contract price is paid by EFT 21 days from the end of the week of harvest delivery.
- **Option Two:** 100% of the contract price is paid 5 working days from the end of the week of harvest delivery (PaddyPay).
- **Option Three:** This option defers payment of 100% of the contract price to 1 July 2027.

If choosing Option Three, and if you have any outstanding Grower Deduction Authorities, please advise the relevant third party of the delayed payment time frame.

You can read more about PaddyPay on our Grower Central website under 'Documents and forms'.

Payment Options:
Please ensure you visit the Grower Portal prior to harvest to choose the payment option that best suits your needs.

7.4. Using the Rice Management Dashboard to deliver outcomes on farm

The Rice Management Dashboard has become an important decision-support tool for the Australian rice industry, with grower utilisation reaching as high as 95% in recent seasons.

The Rice Management Dashboard* is available to all SunRice Growers and provides real-time monitoring of crop development throughout the season. By combining satellite imagery, weather data and crop modelling, the dashboard delivers timely, practical insights that support more confident, informed on-farm decisions. The dashboard complements grower experience and local knowledge by providing an additional layer of evidence-based information to support crop management decisions.

Key features:

- Satellite-driven insights
- Growth monitoring and yield predictions
- Water and irrigation management
- Phenology tracking
- Harvest planning and grain moisture forecasting
- Industry-wide benchmarking

How the dashboard supports your on-farm decision making

The Rice Management Dashboard helps growers turn data into practical management decisions by providing visibility of crop performance throughout the season. Access to timely information enables growers to identify emerging issues earlier, monitor paddock variability and make more targeted management decisions.

Using dashboard insights, growers can:

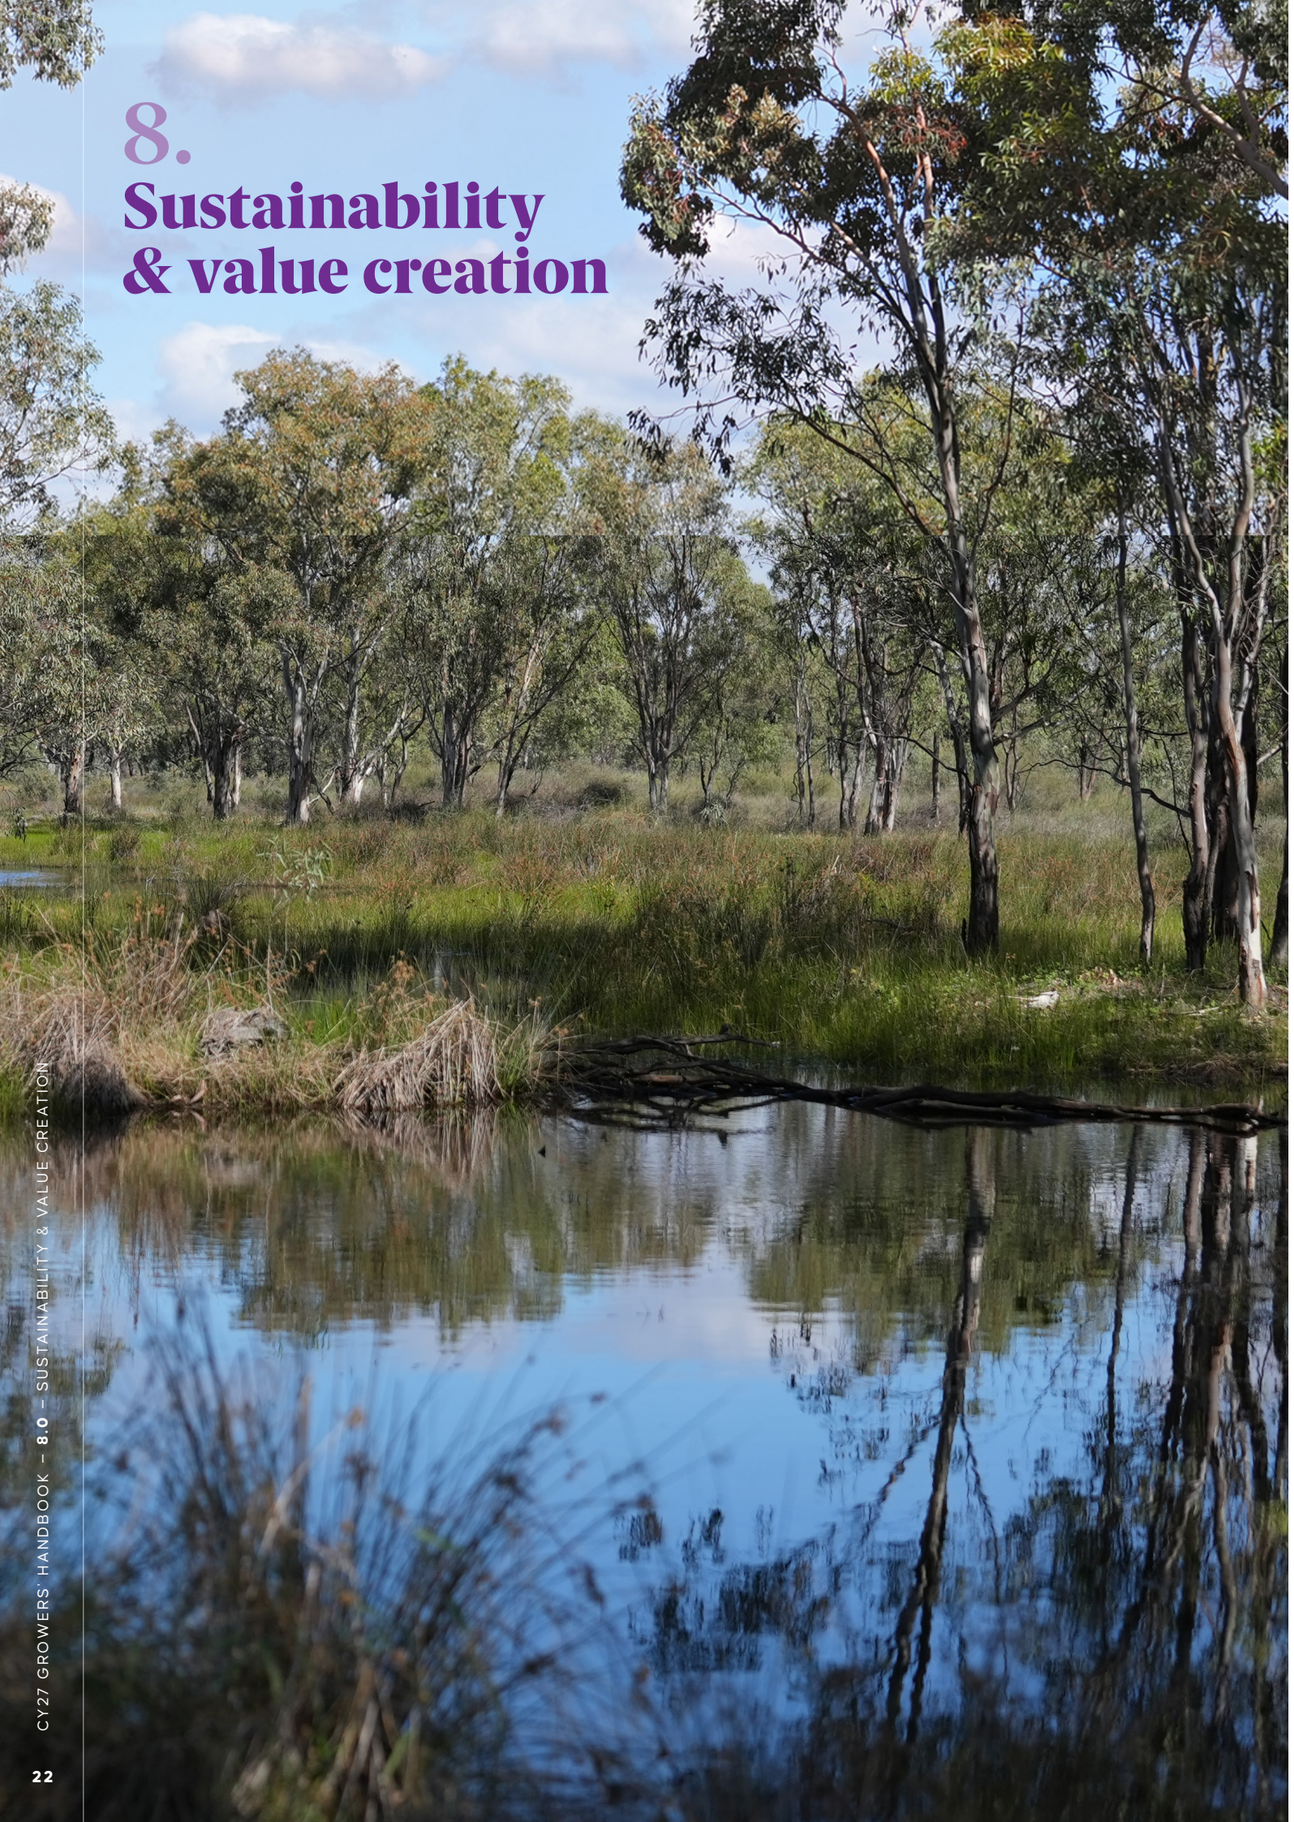
- Monitor crop development and seasonal progress in real time.
- Support irrigation and fertiliser decisions with timely crop information.
- Improve nitrogen management through better visibility of crop performance.
- Predict key crop milestones and support harvest planning.
- Compare current season performance with historical trends.
- Identify variability within and between paddocks to target management where it is needed most.
- Support discussions with advisers using consistent, data-driven information.

How to access your Dashboard

Each SunRice Grower can access a personal link to their Rice Management Dashboard, which provides access to their farms and paddocks dating back to 2018, through the Grower Portal.

For support accessing and using your personalised Rice Management Dashboard, contact the Rice Extension team.

*The Dashboard has been developed as part of the AgriFutures "Real-time remote sensing based monitoring for the rice industry" project by the Applied Agricultural Remote Sensing Centre at the University of New England, in collaboration with NSW Department of Primary Industries and Regional Development, Rice Extension and SunRice Group.



8. Sustainability & value creation

At SunRice our vision and values drive how we do business and how we partner with those in our supply chain. We are committed to the Australian rice industry and to help drive profitable and long-term outcomes for our consumers, communities and planet.

We will do this by partnering with you to support the delivery of the SunRice Group's commitment to be Net Zero by 2050 and by enabling a diversified, resilient and increasingly traceable supply chain.

8.1. Your commitment under our Supplier Sustainability Code

Our Supplier Sustainability Code outlines the standards and business practices that we expect all suppliers, including Australian growers, to comply with. The Code reflects our values to act with integrity, contribute to our community, and be innovative and collaborative. It sets out our expectations in relation to human rights, labour standards, worker health and safety, environmental stewardship, business integrity and responsible supply chain practices.

These expectations are consistent with the internationally recognised human rights and labour standard and align with our commitments to frameworks including the United Nations Global Compact, the United Nations Sustainable Development Goals (SDGs) and the UN Guiding Principles of Business and Human Rights.

SunRice is committed to sourcing from suppliers who demonstrate respect for fundamental human rights, responsible environmental management and ethical business conduct, including compliance with applicable laws and regulations such as those relating to anti-bribery and corruption.

You can access the Supplier Sustainability Code via your Grower Portal or under **Sustainability > Supplier Sustainability** on the SunRice Investor Hub.

You can also watch a detailed overview video by scanning this QR code. https://investors.sunrice.com.au/supplier-sustainability

For questions about the Code, please contact Grower Services or email Group Sustainability at sustainability@sunrice.com.au. Concerns regarding non-compliance may also be raised through SunRice's Speak Up process.

What do you need to do?

For now, we ask that you:

1. Familiarise yourself with our Supplier Sustainability Code.
2. Conduct a review of your current practices against the requirements of the Code and identify any areas for improvement.
3. Continue to work with our Grower Services team and the RGA on the best approach to improve sustainability performance over time.

8.2. Climate-Smart Agriculture Program

SunRice is committed to advancing sustainable rice production and supporting growers to build productive, resilient and profitable farming systems for the future. As part of this commitment, SunRice secured funding from the Australian Government under the Climate-Smart Agriculture Program through the Natural Heritage Trust to deliver a two-year program focused on improving soil health, enhancing biodiversity and natural capital, and supporting low-emissions, water-efficient farming systems.

The program builds on the Australian rice industry's strong track record of innovation and adaptation, and is intended to help growers access new opportunities to improve water productivity, strengthen farm resilience and maintain sustainable production in a changing environment. It includes initiatives such as the Precision Water Management Pilot Project, along with support for on-farm biodiversity improvements, soil health initiatives and farm-specific management planning.

Delivered in partnership with the RGA, Cummeragunja Local Aboriginal Land Council, Murray Darling Wetlands Working Group Ltd and Murray Wildlife Pty Ltd, the program reflects a shared commitment to delivering practical, grower-led outcomes that support the long-term sustainability and competitiveness of Australian rice production.

This project is supported by the Australian Government through funding from the Climate-Smart Agriculture Program under the Natural Heritage Trust.

You can find out more about the program by scanning this QR code. https://www.sunrice.com.au/CY27-Grower-Central-Climate-Smart-Agriculture-Program

9. Your rice harvest

In this section, you'll find important information to help you prepare for harvest, including receival arrangements, depot operations, moisture targets, quality requirements and safety obligations. It also outlines key tools and resources available to support efficient harvest planning and delivery.

Efficient harvest operations rely on seamless coordination, up-to-date information, and adherence to safety and compliance measures. This section provides essential resources to support you in managing your harvest effectively.

It also includes key details on depot operations, safety requirements, and compliance with the Chain of Responsibility (CoR) under Heavy Vehicle National Law.

9.1. CY27 harvest checklist

Step 1:

Access your SunRice Grower Portal to:

- Complete your SunRice Pre-Delivery Declaration.
- Select your Payment Options (see Section 7.3).
- Opt-in to receive Harvest Alerts for delivery details of each load via SMS.
- Print a Delivery Card (if you haven't received yours by mail).
- Review all deliveries for each farm for this and previous crops.

Step 2:

- Review mandatory depot safety, CoR, harvest equipment and food safety requirements with your team (see Sections 9–10).
- Reconfirm depot receival details.

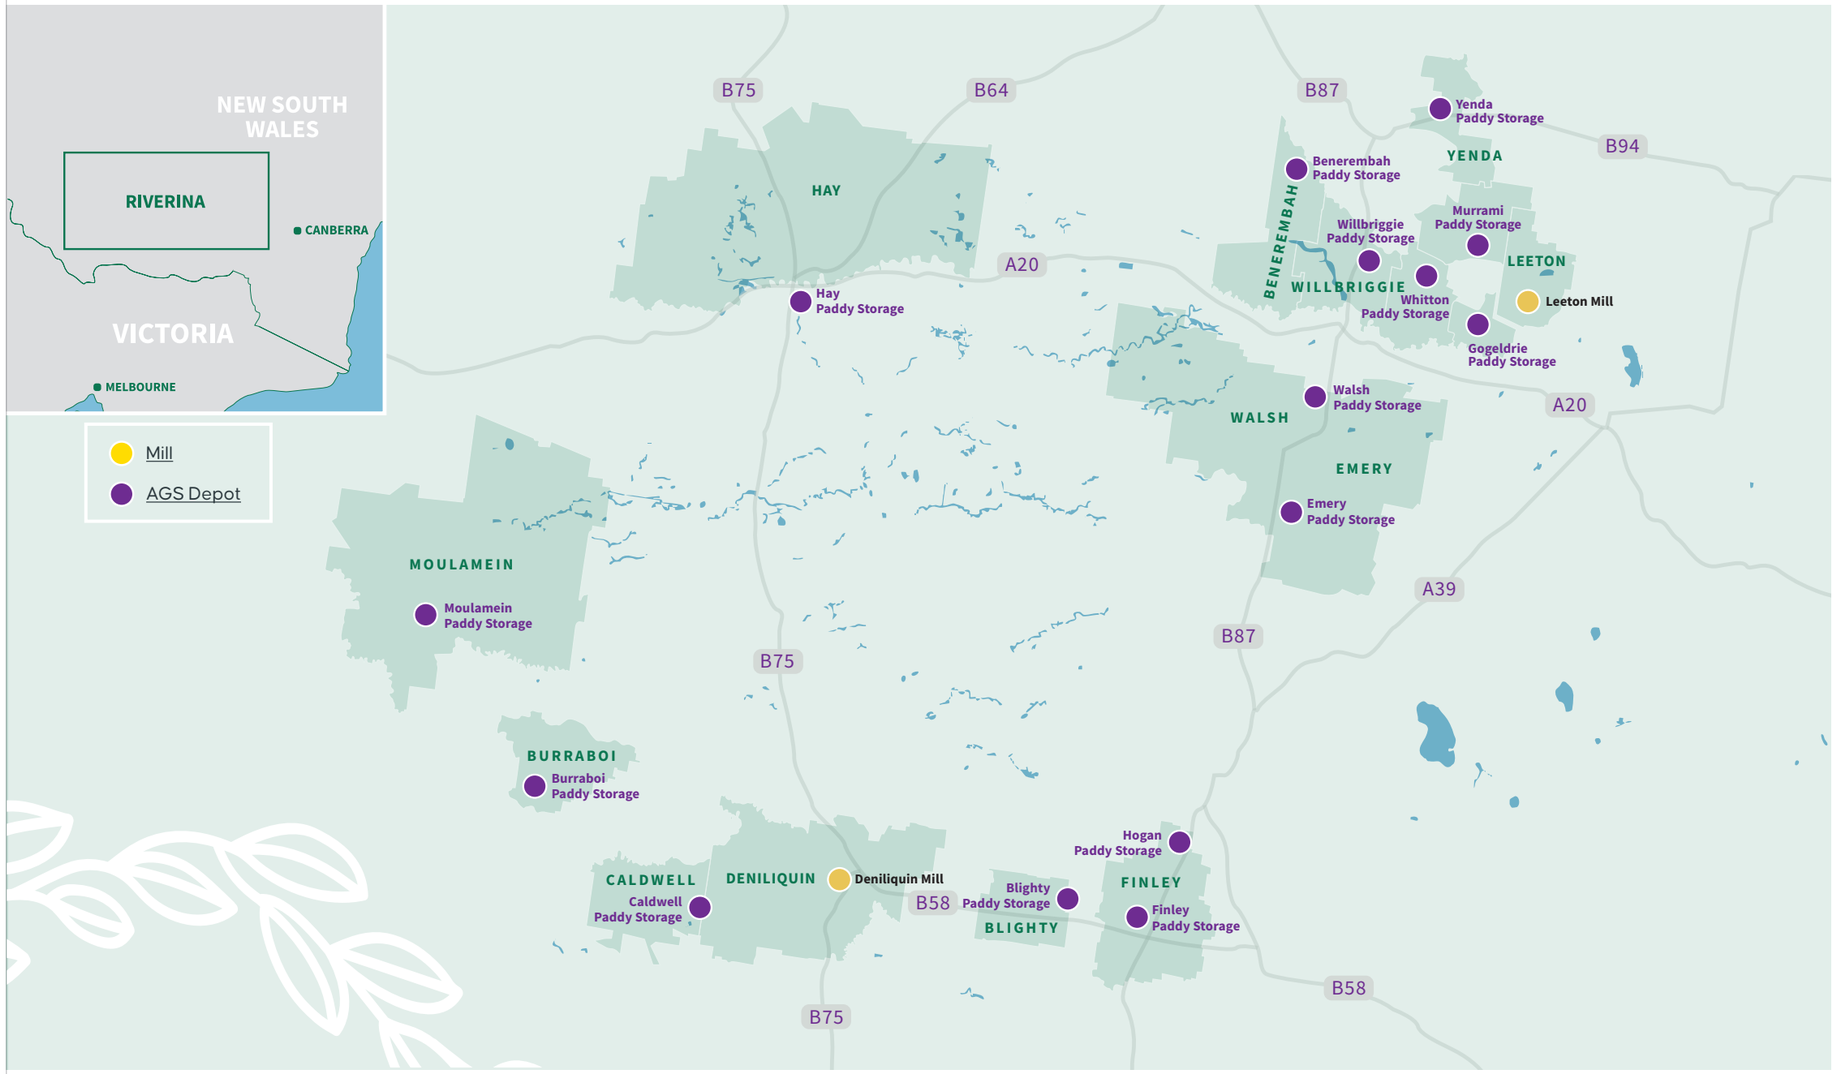
Step 3:

- Refamiliarise yourself with CY27 quality specifications, redirection and late delivery fees.
- Monitor your crop's moisture range to ensure it's within 18%–22% when harvested to maximise grain quality.
- Contact your AGS depot supervisor to arrange a moisture test when you believe your crop is close to 24%.

Step 4:

Access the AGS Harvest App to keep up to date on:

- Varieties being received at particular AGS depots.
- Number of trucks in the queue.
- Moisture limits and any changes in place at the time.
- Details of any breakdowns or other factors impacting service.
- Operating hours and depot contacts.
- Links to important AGS and SunRice harvest-related documents.



9.2. Harvest receival planning

We base our decisions on which depots to open on regional conditions, varieties and volumes to ensure the most efficient intake possible for your harvest.

While it might seem counterintuitive, sometimes it's more cost-effective to pay to redirect volume to another depot further away than open one closer to you.

We'll provide a harvest receival plan as part of your Harvest Update in February 2027. We'll also alert you if any changes need to be made due to factors like crop yield and logistics as harvest progresses.

Depot operating hours

Most depots open at 8:00am during harvest, with closing times dependent on weather conditions and demand.

Because our AGS team's total operating hours need to comply with our SunRice Group Fatigue Management Guidelines, sometimes depot hours are adjusted.

You can keep up to date via the AGS Harvest App or speak with the team at your delivery depot.

Depot contact details

9.3. AGS Harvest Information website (Harvest App)

AGS's "Harvest Information App" is a website specifically designed to keep growers informed with real-time updates and essential information throughout the harvest period. The site is regularly updated to ensure you stay prepared and can make timely, well-informed decisions.

Access the site directly on your mobile device and bookmark it for easy and fast updates. You'll find all your depot sites listed on the left-hand side of the home page. Simply click on a depot to view:

- Depot information.
- Varieties accepted.
- Live truck queue tracking.
- Moisture limits.
- Service updates.

Access the Harvest Information App site at: harvestinformation.sunrice.com.au or scan the QR code.

9.4. SunRice Pre-Delivery Declaration and Farm Delivery ID cards

Before you deliver your crop to SunRice, you must complete your SunRice Pre-Delivery Declaration form, either on the Grower Portal (see the 'Forms and Grower Details' section) or you can contact Grower Services for a copy. This is a mandatory document and ensures we have all the necessary information on your upcoming delivery to facilitate a smooth and efficient intake process.

Farm Delivery ID cards, which are essential for the delivery process, are issued only upon receipt of your completed declaration.

9.5. Paddy moisture targets to ensure grain quality

To maintain grain quality and avoid mill-out issues that may affect your paddy price, we ask all growers to be mindful of factors that can impact paddy quality at receival. In particular, it's important that you deliver most of your paddy within the ideal moisture range of 18%–22% to maximise grain quality.

In the lead up to harvest, we'll work with you to keep across moisture. Please:

- Monitor your crops and use the Rice Management Dashboard, which shows dry down rates and predicted 22% moisture for your individual crop/s. This tool can tell you which day to start harvesting to ensure your paddy stays in the right moisture range.
- Use the sampled moisture dry down rates sent to growers and all agronomists by Rice Extension. Please contact Mark Groat in the Grower Services Technical Team on 0419 174 772 for further information and latest updates. For our part, we'll be flexible where possible with the harvest receival ranges from depot to depot, where it won't pose significant risk to the paddy. Please work closely with our AGS team and:
  - Speak with your depot supervisor at least one week prior to your start of harvest (see the start of this section for contact details).
  - Complete a moisture test prior to starting harvest on crops that you believe may be at high moistures.
- If you think your paddy may be close to 24%, arrange to have a moisture test at the receival depot (we'll have moisture testing at all nominated receival depots).
- For seed deliveries your moisture will remain unchanged at the 20% moisture maximum. This is necessary to ensure we maximise the quality and viability of the Pure Seed Program.

Quality first

Our rice products are marketed as gluten-free. Contamination with wheat and other crops that contain gluten represent a significant risk to our consumers and to our business. Please be aware that loads containing any other grains may be rejected.

See Section 10.3 for our full CY27 Quality Specifications.

9.6. Late harvest delivery fee

As in prior years, a Late Delivery Fee will apply to late paddy receivals in CY27. This fee will be applied only to those growers delivering late loads to enable us to better manage associated costs.

The Late Delivery Fee will be charged at the following rate (per metric paddy tonne) on all deliveries received on or after 15 June 2027:

- 15 June – 30 June 2027: $40/MT
- 1 July – 15 July 2027: $80/MT
- 16 July onwards: $120/MT

Based on historical receivals, more than 99% of all deliveries occur in the first 13 weeks of harvest, with delivery of the <1% remaining occurring in the following 11 weeks. That means we expect less than 1% of deliveries to be impacted by this fee. If unforeseen weather events impact the region, we'll review the dates and come back to you.

9.7. Receival depot safety

SunRice and AGS take Safety, Health and Environment issues very seriously. We have a responsibility to all people on our sites – employees and visitors. As in prior harvests, all growers and contractors delivering paddy are required to complete a site induction that sets out the conditions to be followed at all AGS depots.

This QR code will allow you to complete the induction prior to arriving at site.

If you are unable to complete your induction online, please ask your weighbridge clerk for a paper-based form to complete. Each truck driver will have to complete the induction once only. While all conditions must be followed, in particular we note:

- Fully enclosed footwear must be worn at all receival depots and mill sites.
- High visibility vests/clothing must be worn at all depots and mill sites. Vests will be available (on loan) at all depots, but you are encouraged to wear your own vest or hi vis shirt. If you are not wearing hi vis clothing, you will not be unloaded.
- Please adhere to speed signs. Please ensure you are driving around sites at a safe speed and following all directions.
- Growers/contractors are not permitted to work at heights at AGS depots – this includes but is not limited to climbing on the back of trucks to remove or replace tarps.
- When emptying a truck, it must be tipped in a manner that limits the risk of uneven flow which could lead to an unstable load. The risk of this occurring increases with high moisture and high trash levels or in bins/trailers that are rusty and rarely used, this can be exacerbated in combination trailers.

9.8. Chain of Responsibility (CoR)

All parties in a heavy vehicle supply chain are subject to legal obligations and responsibilities under Heavy Vehicle National Law. SunRice and AGS are committed to ensuring we comply with all CoR obligations and responsibilities.

We also understand that it can be difficult to find information that clearly outlines the CoR obligations for primary producers, and the steps required to ensure you operate in a compliant manner with Heavy Vehicle National Law. To assist, we have placed a range of CoR information directly relevant to primary producers on our Grower Central website under 'Documents and forms'.

This information includes:

- Links to the National Heavy Vehicle Regulator's Chain of Responsibility page.
- A link to a CoR self-assessment.
- A range of information related to the different CoR obligations.
- Tools that you can use to assist in meeting your CoR responsibilities.
- The NHVRs helpline number which can be used for other enquiries.
- The link to email the NHVR for assistance on CoR matters.

9.9. Review of delivery dockets

As a grower, it's your responsibility (or your drivers') to thoroughly check the information on each Rice Receival Docket before signing it at the weighbridge. If any changes are required, you must advise Grower Services immediately.

Opt in for Harvest Alerts!

Did you know details for each load can be sent direct to your mobile phone via SMS Harvest Alerts?

Growers can opt in for these alerts via the home page on the Grower Portal.

Please note that registration for alerts does not carry over from the prior season. Growers must opt in each harvest to receive these alerts.

9.10. Redirection payments

Our redirection payments are typically calculated on a per tonne and per kilometre basis. If any redirection payments are required for CY27, we'll include an overview in your AGS Harvest Update in February 2027 and also keep you up to date on any changes.

To claim redirection, growers will be required to contact the Grower Services team for a redirection claim form.

9.11. Grain Harvest Management Scheme

Every harvest, we receive grain at our AGS depots under the NSW Grain Harvest Management Scheme (GHMS). Under the scheme, any portion of a paddy delivery to one of our depots that exceeds the GHMS concessional mass limit is skimmed and you will not receive payment for that portion of the load. Instead, the finished product equivalent of the skimmed grain is donated to Foodbank Australia in SunRice products on your behalf. In FY26, ~121,900 meals were donated to those in need by SunRice Growers via this program.

~121,900 Meals donated in FY26

Documentation about the GHMS, including the concessional mass limits, is available under 'Documents and forms' on our Grower Central website and at the RMS website: Grain Harvest Management Scheme | Transport for NSW.

Please note:

- To participate in the GHMS, heavy vehicles must carry a copy of the NSW Class 3 Grain Harvest Management Scheme Mass Exemption (Notice) 2024 in the vehicle and comply with the mass limits and operating conditions.

A copy of the document can be found at Federal Register of Legislation – New South Wales Class 3 Grain Harvest Management Scheme Mass Exemption Notice 2024 (No.1) legislation.gov.au/C2024G00327/latest/text or scan the QR code.

Please ensure a copy is carried in trucks operated by you and your contractors during the harvest period. The document contains details about the concessional mass limits and other important information.

- The following Local Government Areas (LGA's) in our rice growing regions have signed on to the GHMS: Carrathool, Griffith, Leeton, Narrandera, Murrumbidgee, Hay, Murray River, Berrigan, Federation, Edward River.

Some of these LGA's have placed specific conditions on their participation. Please visit National Network Map | NHVR or scan the QR code to familiarise yourself with these conditions.

10. Rice quality specifications & testing

In this section, you'll find information on how paddy quality is assessed, how Quality Scores influence your payment and the quality specifications that apply to CY27 deliveries. Understanding these requirements can help you maximise grain quality and paddy returns.

CY27 price payable per tonne

Quality Score	Matilda®	Koshi	Opus®
9.9	$558.00	$800.00	$650.00
9.8	$554.00	$796.00	$646.00
9.7	$550.00	$792.00	$642.00
9.6	$546.00	$788.00	$638.00
9.5	$542.00	$784.00	$634.00
9.4	$537.00	$779.00	$629.00
9.3	$533.00	$775.00	$625.00
9.2	$529.00	$771.00	$621.00
9.1	$525.00	$767.00	$617.00
9.0	$521.00	$763.00	$613.00
8.9	$516.00	$758.00	$608.00
8.8	$512.00	$754.00	$604.00
8.7	$508.00	$750.00	$600.00
8.6	$504.00	$746.00	$596.00
8.5	**$500.00**	$742.00	$592.00
8.4	$496.00	$737.00	$587.00
8.3	$492.00	$733.00	$583.00
8.2	$488.00	$729.00	$579.00
8.1	$484.00	$725.00	$575.00
8.0	$479.00	$721.00	$571.00
7.9	$475.00	$716.00	$566.00
7.8	$471.00	$712.00	$562.00
7.7	$467.00	$708.00	$558.00
7.6	$463.00	$704.00	$554.00
7.5	$458.00	**$700.00**	**$550.00**
7.4	$454.00	$696.00	$546.00
7.3	$450.00	$692.00	$542.00
7.2	$446.00	$688.00	$538.00
7.1	$442.00	$684.00	$534.00
7.0	$437.00	$679.00	$529.00
6.9	$433.00	$675.00	$525.00
6.8	$429.00	$671.00	$521.00
6.7	$425.00	$667.00	$517.00
6.6	$421.00	$663.00	$513.00
6.5	$416.00	$658.00	$508.00
6.4	$412.00	$654.00	$504.00
6.3	$408.00	$650.00	$500.00
6.2	$404.00	$646.00	$496.00
6.1	$400.00	$642.00	$492.00
6.0	$395.00	$637.00	$487.00
5.9	$391.00	$633.00	$483.00
5.8	$387.00	$629.00	$479.00
5.7	$383.00	$625.00	$475.00
5.6	$379.00	$621.00	$471.00

4.1	$316.00	$558.00	$408.00
4.0	$311.00	$553.00	$403.00
3.9	$307.00	$549.00	$399.00
3.8	$303.00	$545.00	$395.00
3.7	$299.00	$541.00	$391.00
3.6	$295.00	$537.00	$387.00
3.5	$290.00	$532.00	$382.00

Our Riverina rice is renowned for its quality and consistency in premium markets around the world. SunRice uses PaddyVision® to assess the quality of each rice load upon delivery. This quality assessment produces a Quality Score which determines the price per tonne you are paid.

For CY27, the price payable per tonne is set out in the table on page 28 and depends on the variety and the PaddyVision® Quality Score and is inclusive of the specialty variety premium.

This section covers the key parameters that influence pricing, including allowances for moisture levels, potential deductions for foreign matter, and the impact of defects such as stackburn, shot and sprung grains, and mixed paddy.

By understanding these quality measures, you can take proactive steps to optimise your rice quality and maximise overall returns.

The Importance of Pure Seed

Maintaining varietal purity is a shared priority between growers and the rice industry, ensuring every crop meets the highest quality standards.

Rather than reusing your own seed, you can access seed through the SunRice Pure Seed Program, developed in collaboration with the NSW Department of Primary Industries and Regional Development at Rice Research Australia Pty Ltd (RRAPL). This carefully managed breeding process preserves genetic integrity, prevents contamination, and ensures the seed remains true to type. Without this approach, natural genetic variation over time could impact consistency, yield, and overall crop performance.

By working together to supply pure seed each season, we eliminate admixture in the field and create uniform crops that ripen synchronously, optimising efficiency and helping to maximise returns for growers. Growing rice in a designated quarantine area further protects against exotic pests and diseases while minimising the need for agricultural chemicals. This collective commitment to purity and traceability safeguards the long term viability and global reputation of our Australian grown rice.

10.1. PaddyVision® overview

PaddyVision® is used to determine a grain Quality Score on receival. Because quality can vary from paddock to paddock, every load you send to us at harvest is tested on arrival.

What is PaddyVision®?

PaddyVision® is an innovative technology developed and implemented by SunRice. In CY26, PaddyVision® replaced traditional Whole Grain Yield (WGY) appraisals and it now determines your paddy price, meaning you now have the ability to earn more or less depending on the quality of the rice you deliver.

How does PaddyVision® work?

PaddyVision® captures photos of a sample taken on every delivery at AGS and uses deep learning algorithms to classify individual grains by defects such as cracks and immaturity. The Quality Score is then determined from this classification and is verified by the tester. PaddyVision® significantly streamlines appraisals by eliminating handling, processing and milling of paddy rice, thereby minimising errors and delays.

How does PaddyVision® align to Whole Grain Yield?

PaddyVision® has been extensively calibrated and validated against expert identification of grain quality defects as well as the standard WGY-based appraisals process. Detailed image classification and WGY validation work has been completed to compare and align milling yield results with PaddyVision® across four consecutive rice harvests. The correlation with WGY is very high.

Why is Whole Grain Yield important?

WGY is a measure of how much whole, unbroken grain we can mill from your rice and therefore the volume of high-quality whole rice we can package and sell. This is directly related to the paddy prices we can pay.

High quality grain = higher whole grain mill out rate = better paddy prices.

Real-Time, Load-Level Feedback

Unlike conventional WGY assessment, which required months of sample processing, PaddyVision® delivers quality insights within minutes of each delivery. This real-time feedback allows you to monitor the quality of every load across farms and varieties. With paddy prices now linked to Quality Scores, you'll know immediately what you'll be paid for each load in line with your PaddyVision® score. You will also be able to request your grain images to avoid disputes.

10.2. Trash overview

During harvest, "trash" refers to rice hulls without grains, rice straw, small fragments of rice and other impurities that can sometimes find their way into a paddy load.

High trash levels in paddy loads reduce receival and drying rates. It's important to understand that when trash levels are impacting operations, AGS has the authority to discuss alternate delivery options with you to ensure efficient harvest receivals for all growers.

We assess trash levels at our AGS depot testing stands using a Model M instrument. Depending on the outcome, an incentive or discount may be applied to your harvest payments on a load-by-load basis:

- For each 0.1% above 4.0% trash, a discount of $0.50 will apply (-$5.00 / 1.0% per tonne).
- For each 0.1% below 4.0% trash, an incentive of $0.50 will be rewarded (+$5.00/ 1.0% per tonne).

Trash Levels received at 4.0% trash will have $0 impact on the contract price.

CY27 GROWERS' HANDBOOK – 10.0 – RICE QUALITY SPECIFICATIONS & TESTING

10.3. All CY27 quality specifications and discounts

The paddy you deliver will need to meet our CY27 quality specifications. These specifications are set out below, along with the discounts that apply if your quality is below our CY27 targets.

Quality	Threshold	Deduction Rate
Moisture Limits	The specification for paddy moisture at delivery is 22% or lower. No discount applies for deliveries up to and including that level.	Where paddy moisture exceeds 22% (unless prior arrangements made with AGS or Grower Services): • For the first 100 tonnes delivered of a variety from a farm, a discount of $1/T for each 0.1% above the maximum moisture limit applies. • For subsequent deliveries of that variety from that farm, a discount of $3/T for each 0.1% above the maximum moisture limit applies.
Stackburnt Paddy	The specification for stackburnt paddy is NIL.	• If declared at delivery, a discount of $10/T per 0.05% applies. • If not declared at delivery, a minimum discount of $20/T per 0.05% will be made, based on the commercial value of paddy.
Mixed Paddy		The specification for mixed paddy varies by variety and is set out below: • For the varieties Koshihikari and Opus® admixtures with other varieties is not to exceed 0.02%. If admixture exceeding this level is detected, the price will be discounted to the lowest grain price applicable to the variety/s contaminating the paddy. • For other varieties, admixture is not to exceed 2.0%. If admixture exceeding this level is detected, the price will be discounted to the lowest grain price applicable to the variety/s contaminating the paddy.
Mildly Shot and Sprung Paddy	The specification is NIL contamination with shot and sprung paddy.	• Mildly shot and sprung paddy is defined as loads that when tested have more than three grains in a 25-gram sample that have a dark coloured embryo with or without small, desiccated sprouts that are no longer than half the length of the grain. • If declared at delivery, a discount of $3/T applies. • If not declared at delivery, a discount of $7/T applies.
Seriously Shot and Sprung Paddy	The specification is NIL contamination with shot and sprung paddy.	• Seriously shot and sprung paddy is defined as a load that when tested has more than three grains in a 25 gram sample that have a dark coloured embryo with desiccated sprouts that are longer than half the length of the grain. • If declared at delivery, growers will receive a price that results from AGS achieving the best possible price for a product that is at the low end of the stockfeed quality and price range. • If not declared at delivery, the price will be at a 10% discount to the price paid for loads that are declared at delivery.
Paddy Contaminated with Glass	The specification is NIL contamination with glass.	• If declared at delivery, a discount of $50/T per piece applies. If not declared at delivery, a discount of $100/T per piece applies.
Paddy Contaminated with Foreign Matter (seeds, fertiliser, stones, metal)	The specification is NIL contamination with foreign material.	• If found at delivery, a discount of $5/T for the first two pieces and $1/T thereafter to a maximum of $30/T applies.
Paddy Contaminated with Foreign Matter (burrs, mud, dirt, stored grain insects)	The specification is NIL contamination with foreign material.	• If found at delivery, a discount of $1/T for the first two pieces and $1/T thereafter to a maximum of $5/T applies.
Crop Protection Products		All crop protection products must be used in accordance with both the label registration and as advised by SunRice to ensure that for export purposes Maximum Residue Levels (MRL) are not exceeded. If excessive MRLs are detected in your load, it may be deemed as unmerchantable or subject to a discount at SunRice's reasonable discretion. Please note MRL's could change throughout the growing season depending on updates from countries where Australian rice is exported. We will communicate with you and your agronomist if this occurs.
Merchantable Quality/ Subject to Appraisal		Please note your AGS Supervisor / Coordinator has the discretion and authority to reject paddy on behalf of SunRice in accordance with clause 7.1.

10.4. Food safety guidelines

The food safety (contamination) risks for paddy can be divided into three groups:

- **Physical** – glass, metal, plastic, stones, foreign grain or weed seeds.
- **Chemical** – agricultural pesticide residues, baits or fumigants.
- **Biological** – mould toxins.

If any of these materials are found in packaged rice, it can be very costly to the industry in both monetary terms and reduced market access. It takes time to build a reputation for a quality food product, but it can be quickly destroyed with one widely publicised contamination incident. Producing quality rice on your farm is the first step in the supply chain to the consumer. All parts of the supply chain must be equally careful to avoid foreign matter contamination.

Storage, drying, processing and distribution stages also have procedures to eliminate these materials. Most on-farm food safety risks occur during harvest, but a responsible attitude around the farm all year can reduce some risks.

You need to know what the major concerns are so you can assess and minimise the risks on your own farm.

1. Glass contamination can occur from a number of sources.

- Any kitchen waste with glass should be quickly buried in a place reserved for such material.
- All glass and plastic containers used in the workshop or in the servicing of equipment should be handled with care and kept in a safe place.
- Glass lens covers on vehicle and machinery lights should be inspected regularly and replaced if cracked. Covering lenses with plastic film can prevent glass loss in the event of a breakage.
- Overhead lights in sheds can break on impact with headers or augers. Beware of such lights.
- Food or drink in disposable glass containers should not be consumed in the farm area where crops are grown and machinery is operated. Convey this policy to duck shooters.
- SunRice storage, handling and processing sites are zoned "glass free" and farm areas (as distinct from the household) could follow the example.
- Farms adjoining main roads are at risk of travellers throwing bottles into canals and drains. These bottles can float and may enter a rice paddock on your farm or further down the irrigation system. Collect and dispose of any bottles found in such areas.

2. Metal objects can contaminate paddy and their presence must be avoided.

- Ferrous metals can be removed during processing by strategically placed magnets but heavy contamination levels can overload the system. Non-ferrous metal is more difficult to detect and remove.
- Preventative maintenance, regular servicing of harvest machinery and being careful with small tools and parts will minimise paddy contamination by metal.

3. Gravel and stones are serious contaminants.

- Roads (especially shoulders) allow loose stones and gravel to lodge in tyre treads. Tyres with a block or bar tread pattern will collect less gravel.
- Installation of corrugated approaches to intake pits can dislodge stones by flexing tyre walls.
- Gravel in paddy can also occur from trucks previously used for hauling road materials. This gravel contamination (as distinct from the road source) is easily avoided by cleaning truck bins.

4. Foreign grain, weed seeds and fertiliser contamination of paddy is all too common.

- Foreign grain results from residues left in headers, trucks, field bins and augers. Trucks, bins and augers are fairly easy to clean.
- Headers are more difficult, but every effort must be made to clean the machine prior to harvest. Remove any covers from elevators or cross augers; remove the sieves and use an air compressor to dislodge grain / trash from the less accessible places. Run the machine for a short time and then repeat the process with a high-pressure water cleaner or a fire fighter pump. Again, run the header for a short time before refitting the covers and sieves. A header clean-out after harvest of another grain like maize, soybean or wheat can take about an hour to do satisfactorily. Cleaning equipment between different rice varieties is also needed.
- Thorough cleaning of truck bins is essential and contractor trucks must be checked at the commencement of each day. A suitable broom should be kept on hand, preferably in the cab, to sweep the truck bin. The delivery chit requires the truck driver sign that "the bin was clean before loading with paddy".
- Weed seeds come from plants on the banks and field edges. Practice good crop hygiene and spray or chip any weeds from such areas.
- Fertiliser contamination occurs through improperly cleaned handling equipment such as field bins, silos, augers and more particularly trucks. Contractor trucks alternating between rice and fertiliser haulage pose a special risk. Urea is highly toxic to humans and the granule size, shape and colour is similar to rice.
- Levels of flutriafol have been detected on grain carried in trucks that had previously carted fungicide treated fertiliser. Maximum Residue Limit (MRL) have arisen when marketing this grain. Sweeping is not sufficient to minimise the possibility of such violations occurring. A thorough washing of the vehicle and equipment used to handle the fertiliser treated with fungicide is required and will more effectively reduce the levels of reside fungicide, therefore minimising the risk of cross contamination of grain.

CY27 GROWERS' HANDBOOK – 10.0 – RICE QUALITY SPECIFICATIONS & TESTING

10.5. Harvest equipment cleaning procedures

All rice growers and their harvest contractors and carriers (where involved), need to know why harvest hygiene needs to improve and how it can be achieved.

The problem

1. Expenditure on grain pest eradication is increasing and restrictions on the use of methyl bromide and resistance to some pest control treatments are an added concern. Prevention is always better than a cure.
2. Contamination of incoming paddy exposes SunRice to risk, decreases supply chain efficiencies and inflates the cost of processing.
3. Independent investigation by entomologists previously indicated grain pest build up in new paddy sheds could have arisen from infested grain delivered into those sheds. The infestations probably originated from "dirty" (uncleaned) harvest equipment harbouring residual grain from the winter crop harvest.
4. The most serious pest infestations occur when storages or harvesting equipment are not cleaned properly before the first few loads of new season's paddy are delivered. Testers will always target the first few loads.
5. Cleaning and disinfestation of the storage facilities is the responsibility of SunRice, but growers must also play their part by adequately cleaning all harvest equipment before harvest commencement.
6. Good hygiene should be practiced all year round as insect infestations can develop from any residual grain left undisturbed and unprotected. Grain spillages and residues in either open or confined places can provide grain pests with an opportunity to multiply. The best policy is to clean up any grain remnants with a vacuum cleaner or sweep with a broom and then burn or bury the material.
7. Past surveys of rice harvest equipment show many headers and field bins have not been adequately cleaned after cereal harvest was completed. Residual grain in such harvesters and bins can already be infested with grain beetles and weevils.
8. The paddy receival procedure used at the testing platform aims to detect any grain pests in the sample by use of a simple screening technique. Where live insects are detected in delivery samples, dockage penalties will be enforced.
9. Levels of flutriafol have been detected on grain carried in trucks that had previously carted fungicide treated fertilizer. Maximum Residue Limit (MRL) have arisen when marketing this grain.

The solution

The proper cleaning of harvest equipment is the first step to eliminating grain pest problems in paddy.

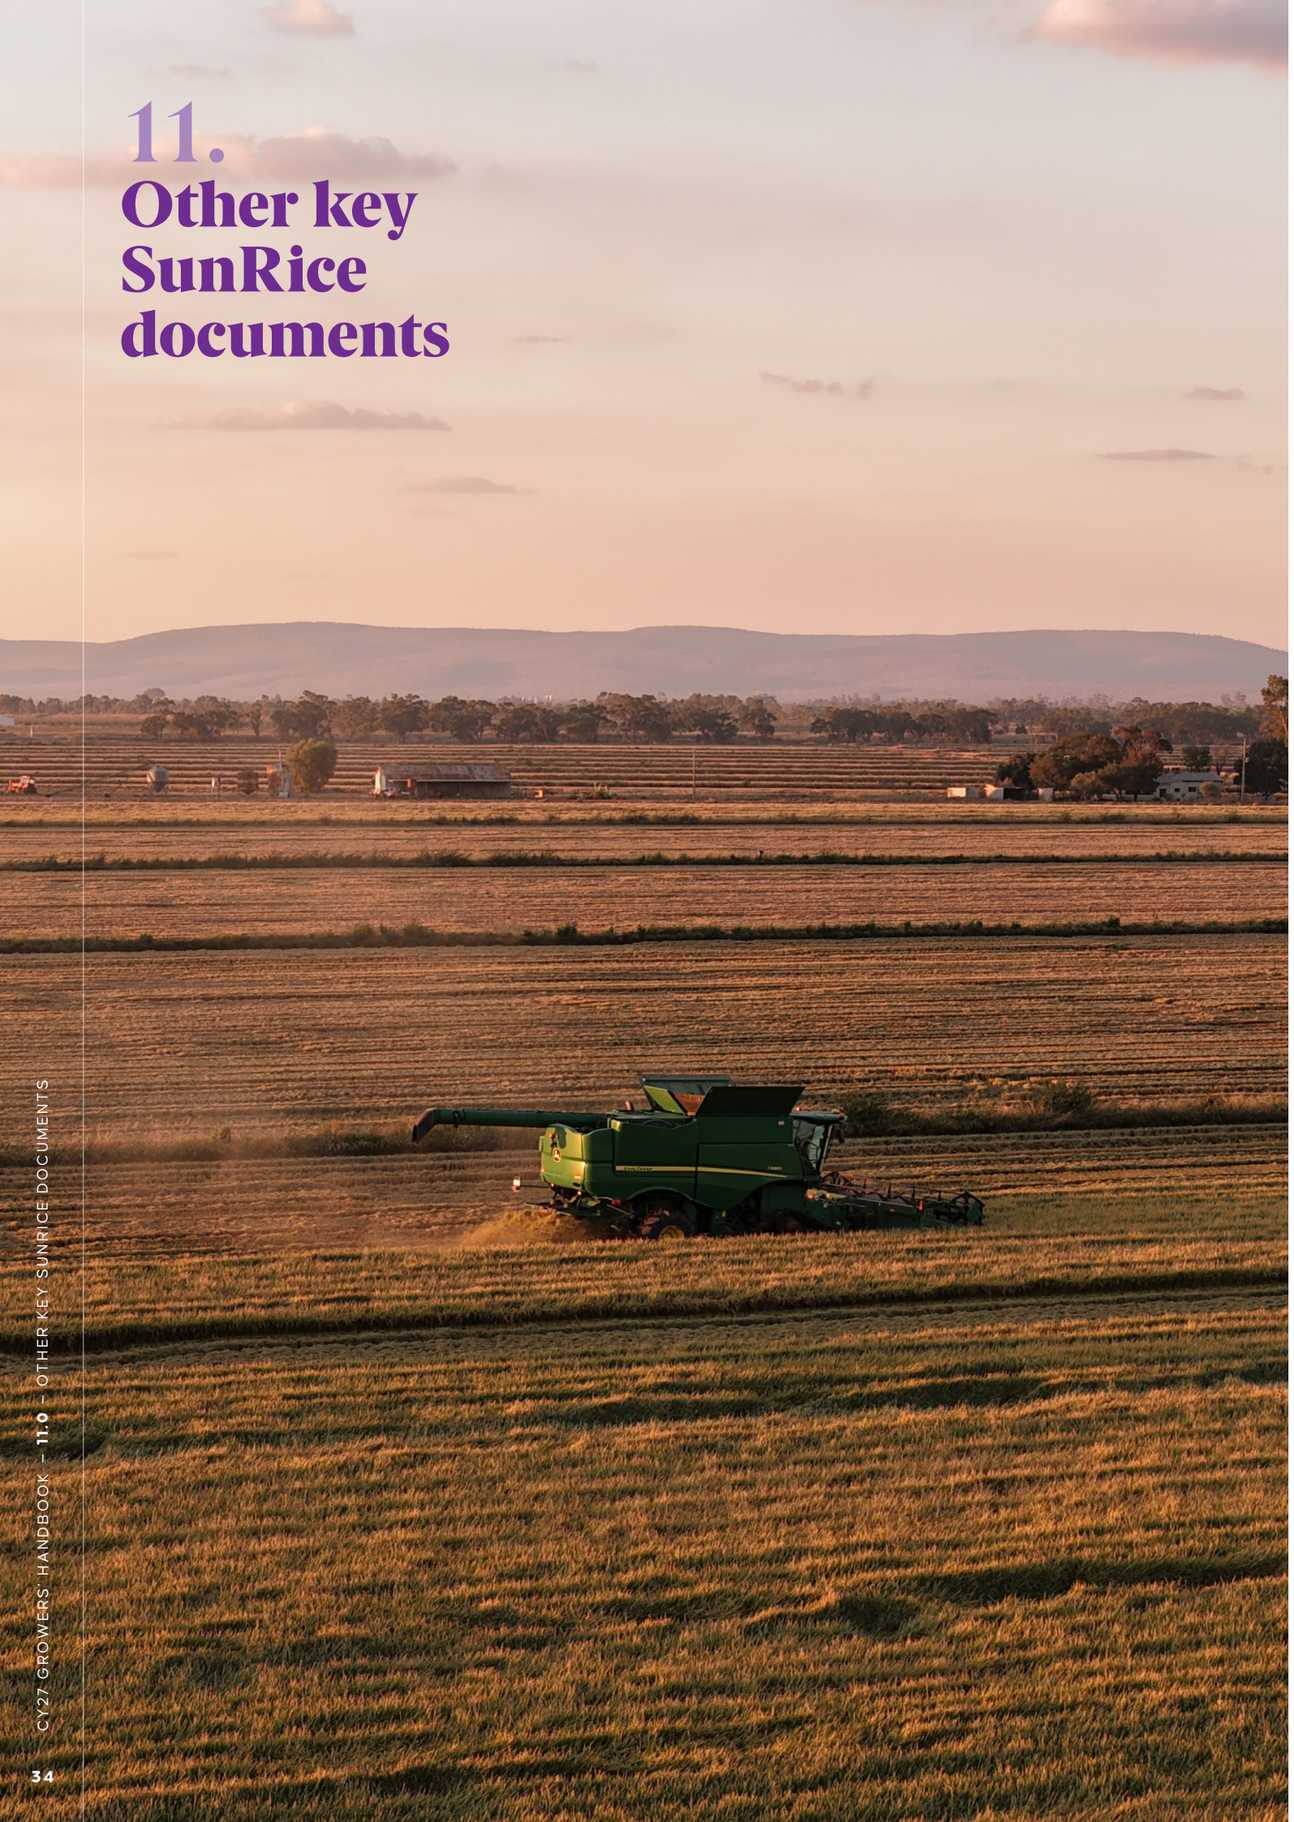
The following steps are recommended to clean a harvester:

1. Clean harvesters immediately after harvest but if it hasn't been done yet, do it as soon as possible.
2. Open / remove all auger and elevator covers and inspection plates. Set the fan to maximise the airflow.
3. Run the harvester (static) with all inspection covers open for two minutes to eliminate most of the grain and chaff residues.
4. Disconnect the header front to allow better access. Remove the riddles and screens. Both these tasks will only take a few minutes but will greatly improve the ability to clean the machine.
5. Remove any grain and trash by using a high-pressure water cleaner or firefighting unit, starting at the top of the machine. Clean down all external surfaces before commencing on the internal parts.
6. Internal areas must include the header front, crop feeder housing, drum and concave, straw walkers, riddle box, fan case, grain box and rotary grain separator (if fitted). Commence cleaning on the upper areas first so grain and residues are flushed down to the escape points where covers have been removed. Avoid aiming high pressure jets at bearings and bushes as it may damage seals and remove lubricants. It is important to clean the harvester in the heat of the day to dry it sufficiently.
7. After washing down, dry the harvester by running it again for a minute or two with maximum airflow passing through the machine. Alternatively, artificially dry the machine using compressed air or a high-volume air blower.
8. After the machine is dry, an air compressor can be used to flush out any remaining grains in cracks and crevices. Fitting a rigid copper pipe extension to the compressor hose outlet will give better access to difficult places. Alternatively, a cheap attachment commonly called a "trigger vacuum" which operates on the venturi principle can be fitted to the end of the compressor hose to suck up any loose grains. Other useful cleaning equipment includes handheld electric blowers that can be fitted with PVC extensions for dislodging any grain and it will quickly dry inaccessible areas. In addition, purpose-built blower and vacuum equipment designed to clean harvesters is available and is well suited to contractors who need to clean machines down regularly.
9. It will take a couple of hours to clean a header satisfactorily after harvest is completed and even so, there may still be some grain lodged in the most inaccessible areas. While it is impossible to guarantee a header is completely clean of all grain, around 99% should be removed by the cleaning method described above. For specialist seed growers who need a thoroughly clean machine, it may be necessary to dismantle and remove more panels and covers to get the necessary access.

Cleaning other harvest equipment must not be overlooked:

1. Trucks should be externally cleaned of any grains and debris and the tray and bin parts also swept or washed down. Trucks are easily cleaned but often ignored as a source of contamination. There have been a number of incidents in the past that could have compromised paddy quality because of failure to check truck bins. Do not presume the bins are clean!
2. A thorough washing of vehicles and equipment used to handle fertilizer treated with fungicide is required to effectively reduce the levels of residue fungicide, therefore minimizing the risk of cross contamination of grain.
3. Grain augers can be run in reverse to clean grain off the flights and the hoppers should be removed and cleaned.
4. Field bins and tractor chaser bins need more attention. They should be cleaned of grain in the bin, the auger flights and more importantly in the surge box/grain box compartment at the junction of the horizontal and unloading augers where grain accumulates. Remove/slide the covers to access the surge box. Proper cleaning of field bins and chaser bins is sometimes forgotten since most of the emphasis is on cleaning out the harvester. These bins are often a major source of contaminated grain and grain pest infestations.
5. If possible, do not shed or store harvest equipment near places where grain is being stored. Where it is unavoidable, make sure there is no spilt grain or bags of left over grain in the same area.
6. Where silos of grain or seed exist, make sure there is no grain and debris lying around the base of the silos that could attract grain insects. Keep the area free of weeds to ensure any spilt grain is easily detected and removed.
7. If the storage facilities, harvest equipment, field storage bins and truck bins are all cleaned in advance of harvest, the opportunity for grain pests to multiply in paddy is very much reduced. It's essential that all involved with harvest equipment complete the necessary hygiene in advance – we can't afford any slippage that might compromise our quality.

We look forward to your cooperation in thoroughly cleaning your harvest equipment this season. This will avoid foreign material, other grains and grain insect pests being detected at receival, which results in significant payment discounts.



11. Other key SunRice documents

Most forms you'll need as a grower are already on your Grower Portal (there's a handy list of what you can and can't do on the portal on page 17).

11.1. Personal Information Collection Statement

SunRice is committed to fulfilling its obligations under the Privacy Act 1998 (Cth) (Privacy Act) and the Australian Privacy Principles (APPs).

The purpose of this collection statement is to notify you of certain matters as required under the APPs. This collection statement should be read in conjunction with our Privacy Policy (found at www.sunrice.com.au/au-privacy-policy) which sets out how we handle your personal information.

If you are providing personal information about or on behalf of an individual, you must ensure the relevant individual is made aware of this collection statement.

How we collect personal information

We collect personal information from you directly, if it is practical to do so, in the following ways:

- when submitting forms to us (either in hard or soft copy) for matters such as registering as a new grower with SunRice, updating personal details or ordering goods; and
- submitting a request or query to us face-to-face, in writing (by letter, email or by telephone.

Purpose of the collection of personal information

We collect personal information for the following reasons:

- screening and assessing new rice growers;
- making contact with individuals and organisations that SunRice deals with or wants to deal with;
- undertaking research, development and extension relating to rice crops;
- processing and administering payments;
- forming and performing agreements for the supply of goods or services, including supply of seed and receipt of paddy; and
- provision of information relating to shareholdings, including issuing and redemption of shares.

Collection of your personal information from third parties

We may collect personal information or data about you from a third party (including other growers in shared farm arrangements) if you have been nominated as an authorised representative or a contact person of that entity in its dealings between us and the relevant third party.

Disclosure of personal information

We may disclose your personal information to our related bodies corporate, contractors, agents and third parties in order to provide goods, services or information requested.

We may also provide your personal information to our third-party service providers who provide services in connection with the operation of our business.

Certain information you provide us about your farm (such as your seed purchases, crop yield, and farming practices) will be disclosed to our related bodies corporate and to research organisations for the purpose of rice crop research and the Rice Management Dashboard.

If you provide us with such data, we will give you, and your agronomist, access to your farm data in the Rice Management Dashboard.

You may choose not to consent to the disclosure of your personal information to third-party service providers or research organisations, either by contacting SunRice Grower Services on 1800 654 557 or in the SunRice Pre-Delivery Declaration for your crop.

Consequences if personal information is not collected

If you do not or are unable to provide us with the requested personal information, we may not be able to provide you with the information, goods or services which you have requested, finalise payments for goods that you have supplied to SunRice, or provide you with access to the Rice Management Dashboard for your farm data.

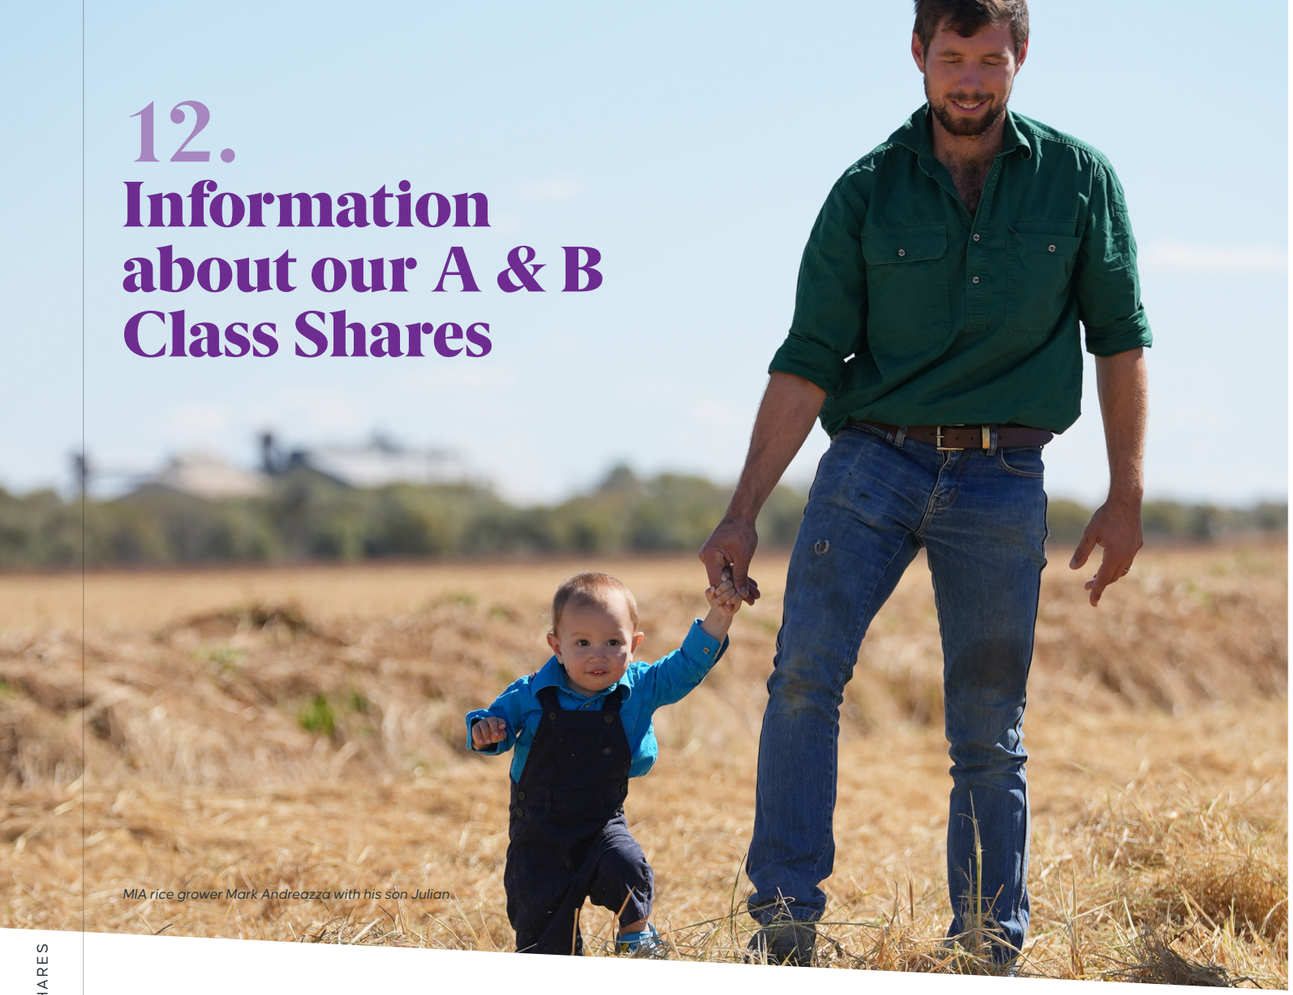
Complaints, access and correction

SunRice's Privacy Policy contains information about how you can access personal information we hold about you, seek correction to that information and submit a privacy complaint and our process in dealing with such complaints.

Disclosure overseas

We do not disclose your personal information overseas unless we have otherwise specified.

12. Information about our A & B Class Shares



MIA rice grower Mark Andreazza with his son Julian.

SunRice has a dual class share structure comprising A Class Shares and B Class Shares. A Class Shares are held by Active Growers (and persons whom the Company directors believe, on reasonable grounds, will become Active Growers) and B Class Shares are held by investors. The Company's objective is to optimise returns for both classes of shareholders.

This section provides information on the eligibility criteria and the rights attached to each class of shares. You should refer to the SunRice Constitution for full details as to the rights attached to SunRice's A and B Class Shares.

12.1. About A Class Shares/Shareholders

A Class Shares are redeemable preference shares offered by SunRice, which give their holders the right to vote at general meetings of the Company.

A Class Shares are not quoted on any exchange and can only be held by Active Growers (and persons whom the Company directors believe, on reasonable grounds, will become Active Growers).

A Class Shareholders have no right to receive dividends or distributions, other than the right to be repaid the amount paid up on the A Class Share on redemption or a winding up of SunRice (the amount paid up on A Class Shares is currently nil).

In practical terms, the voting rights attached to A Class Shares give A Class Shareholders control over the election of Directors and any changes to the Constitution, and therefore, control of SunRice.

Who is eligible for A Class Shares?

A Class Shares can only be issued by the Board to "Active Growers" or people that the Board believes, on reasonable grounds, will become Active Growers.

To qualify as an Active Grower, you must supply a rolling average of at least 50 metric tonnes of paddy rice (being your produce and not acquired for delivery) to SunRice over a four-year delivery period, totalling at least 200 metric tonnes of paddy rice in that four-year period on or before a prescribed date in each year.

To then qualify for a Second A Class Share, you must supply a rolling average of at least 400 metric tonnes of paddy rice (being your produce and not acquired for delivery) over a four-year delivery period by the prescribed date, totalling at least 1,600 metric tonnes of paddy rice in the four-year period, with rice being supplied in at least two of those four years.*

Note that the Directors may, at their discretion, refuse any application for Shares and need not assign reasons for such refusal.

Is there an A Class Shareholding Limit?

Yes, a person must not hold more than five A Class Shares, which may include no more than one "Second" A Class Share.

Can I purchase A Class Shares?

No. To apply for A Class Shares, rice growers need to follow SunRice's formal process. This typically involves completing an application form, meeting the required criteria, and submitting the necessary documentation. For more information, please refer to the SunRice Constitution or contact our Grower Services team.

What rights do A Class Shareholders have?

As an A Class Shareholder, you are entitled to vote at the SunRice Annual General Meeting (AGM) on important matters such as the election of directors, changes to the Constitution and other matters put before the AGM.

As an A Class Shareholder you may have up to (but no more than) two votes at the AGM:

- One vote, if you hold one or more First A Class Shares; and
- One additional vote, if you hold a Second A Class Share.

*Further details regarding the issue of A Class Shares are available in the Ricegrowers Ltd Constitution under 'Corporate Governance' at investors.sunrice.com.au.

Are A Class Shares transferable?

No. Once issued, A Class Shares cannot be transferred to any person (including family members).

Do A Class Shareholders have to hold B Class Shares?

Yes. Each holder of an A Class Share must also acquire at least 3,000 B Class Shares within three years of becoming an A Class Shareholder. Where an A Class Shareholder has received a Second A Class Share, they must hold an additional 1,000 B Class Shares within one year of receiving their Second A Class Share.

You must retain those B Class Shares, otherwise your A Class Shares may be redeemed.

12.2. About B Class Shares/Shareholders

B Class Shares are listed on the ASX and can be acquired by investors.

Who is eligible for B Class Shares?

B Class Shares can be purchased on the ASX or via a broker.

Is there a B Class Shareholding limit?

Yes, a person must not hold a number of B Class Shares which, when aggregated with any B Class Shares held by all associates of that person, exceeds 10% of the total number of issued B Class Shares.

If a shareholder holds B Class Shares in excess of the B Class Shareholding Limit (Excess Shares), all rights of that shareholder (including right to vote at meetings of B Class Shareholders and right to receive dividends) in respect of those Excess Shares are suspended while the breach of the B Class Shareholding Limit continues.

What rights do B Class Shareholders have?

B Class Shareholders are entitled to dividends (if declared) and to participate equally with the other B Class Shareholders in any surplus on a winding up of SunRice, after the repayment of any amount paid up on the A Class Shares (which is currently nil).

While B Class Shareholders aren't generally able to vote at general meetings of the Company, they have the right to vote on matters relating to the Company that involve a variation to their class rights (including those matters deemed to vary their class rights under the Company's Constitution) and as otherwise required for the purposes of the ASX Listing Rules.

Are B Class Shares transferable?

Yes. The B Class Shares in SunRice can be transferred in the same way as other shares quoted on the ASX.

12.3. Useful links and resources

SunRice B Class Shares trade on the ASX under the name Ricegrowers Limited, and the ticker code SGLLV.

SunRice's Investor website (investors.sunrice.com.au) has more information about our dual class share structure, SunRice's share registrar, our financial reports and our plans for growth. This includes:

- **SunRice's financial reports:** including our Annual Report, Half-Yearly Reports, and other periodic financial statements. These reports provide a comprehensive overview of our financial performance, including revenue, profits, dividends, and forecasts.
- **Key announcements:** including announcements that impact shareholders, such as updates on corporate governance, dividend declarations, capital raises, mergers, and any other significant developments.
- **Corporate governance:** including details on SunRice's corporate governance policies and practices, including the Board of Directors, committee structures, and our governance frameworks.
- **Shareholder services:** Information on how to manage your shareholding, including details on how to update your contact information, transfer shares, or vote at the AGM or B Class Meeting.
- **Investor presentations:** Slides and materials presented at SunRice's investor briefings and annual meetings. These provide insights into our strategy and future direction.
- **FAQs:** Frequently asked questions about investing in SunRice, shareholder rights, and other essential information for current and prospective investors.

This information is general in nature and does not take into account your personal objectives, financial situation or needs. You should consider whether owning Shares in SunRice is appropriate for you.

CY27 GROWERS' HANDBOOK – 12.0 – INFORMATION ABOUT OUR A & B CLASS SHARES

13.
Our industry partners

We're proud to collaborate with key industry partners who share our vision of advancing the Australian rice sector through innovation, sustainability, and continuous improvement.

Our partnerships with organisations like the Ricegrowers' Association of Australia Inc. (RGA), Rice Extension, AgriFutures Australia, and Rice Breeding Australia are essential in shaping the future of rice farming in the Riverina.

Our partners play a pivotal role in supporting you by providing advocacy, research, and the development of technologies that enhance productivity and water use efficiency. Together, we're working toward ensuring our Australian rice producers are among the global leaders in sustainable farming practices, to foster growth within the industry, and to help future-proof Australian agriculture.

Ricegrowers' Association of Australia Inc. (RGA)

The Ricegrowers' Association of Australia (RGA) is the collective voice of rice growers in Australia. The RGA represents voluntary members and supports growers on issues affecting the viability of their business and communities. The RGA provides a strong, united voice for the rice industry on key policy areas, including water, environmental sustainability, productivity and industry affairs.

The RGA is a member of the National Farmers Federation, National Irrigators Council, NSW Irrigators Council, Plant Health Australia, and the Associations Forum.

For more information see: rga.org.au/about

Rice Extension

The Rice Extension program is funded by AgriFutures Australia and is delivered by SunRice Group in partnership with the RGA. The program connects rice growers with essential information for rice-based farming systems to increase the adoption of research that improves grower productivity, profitability and sustainability of Australian rice production.

Rice Extension is focused on knowledge sharing, innovative thinking and a collaborative science-based approach.

For more information see: riceextension.com.au

AgriFutures Australia

AgriFutures Australia is one of 15 Research and Development Corporations (RDCs) that service the Research, Development and Extension (RD&E) needs of Australian rural industries, including rice. AgriFutures' Rice Program is focused on research, development and extension projects that benefit the Australian rice industry. It's funded through statutory levies, paid by rice growers, and matched funding from the Australian Government.

For more information see: agrifutures.com.au/rural-industries/rice

Rice Breeding Australia

Rice Breeding Australia Ltd was established to drive development of new varieties for the Australian rice industry, with an increased focus on water productivity improvements and acceleration of rates of genetic gain in rice breeding in Australia. A joint venture between AgriFutures Australia, SunRice Group and the Ricegrowers' Association of Australia (RGA), Rice Breeding Australia aims to drive rice breeding into the future.

For more information see: ricebreedingaustralia.com.au

Rice Research Australia Pty Ltd

Rice Research Australia Pty Ltd (RRAPL) is a subsidiary company of SunRice, based at 'Old Coree' in Jerilderie. RRAPL is responsible for Pure Seed Production. It conducts research on rice varieties and agronomics and works with NSW Department of Primary Industries and Regional Development, AgriFutures Australia, universities and suppliers.

SunRice employees Peter McDonnell, Eleanor Fondacaro, Melissa Lyons, Lisa O'Callaghan and Chris Quirk

14. Contact us

We're here to help you make the most of every season.

Call **Lisa, Eleanor and Melissa** in the Grower Services Support Team on **1800 654 557** or email us on **growerservices@sunrice.com.au** for:

- Change of farm, banking or business details.
- Grower Portal support, including contracting, farm mapping and seed ordering.
- PaddyPay, GrowRice, crop insurance and other products.
- Payment information.
- General questions, including which forms to use and how to access them.

Call **Mark (0419 174 772)** in the Grower Services Technical Team for advice on:

- Variety selection.
- Planting advice.
- Crop management and monitoring.
- Accessing and using your Rice Management Dashboard to inform decision making.
- Understanding your PaddyVision® results.

We look forward to growing with you.

15. Handbook definitions

"**CY27**", "**Crop Year 2027**", "**CY27** season" and "**this season**" all refer to the rice crop planted in 2026 and harvested in 2027, which will be processed and marketed in the Financial Year ending 30 April 2028.

"**SunRice**", "**SunRice Group**", "**Group**", "**the Company**", "**we**", "**our**" and "**us**" refer to Ricegrowers Limited ABN 55 007 481 156 and its controlled entities.

"**SunRice Grower**" or "**Supplier**" refers to a grower who purchases seed from SunRice and return resulting paddy to SunRice for processing and marketing.

"**Non-Supplying Grower**" refers to a grower who accesses seed from SunRice or a third party and either processes and markets the resulting paddy itself or supplies it to a third-party for processing and marketing.

"**Riverina rice**" refers to rice grown in the Riverina region.

"**PBR Seeds**" refers to seed of varieties subject to Plant Breeders' Rights.

"**Matilda**$^{\Phi}$" refers to the PBR protected variety, YRE16 V071, previously known as "V071".
